1. Executive summary

This deliverable presents the final plans of the 5 Transformative Experiments of implementing RRI in a territorial context, which takes place in WP5: Implementing the Transformative Experiments.

It also presents the work conducted in WP4: co-design of transformative experiments, towards the formulation of the final plans of the 5 territorial Transformative Experiments (T4.2: Regional Concept note for the Transformative Experiments and T4.3: Regional co-design process).

The steps completed by the 5 territories in the co-design phase are presented in the following and include: the development of the concept note for the co-design phase, the actual co-design phase in a time of covid-19, and the final plans of the 5 territorial Transformative Experiments for implementation.

2. Introduction

The overall objective of the Territoria project is to experiment with the adoption of Responsible Research and Innovation (RRI) approach in European regional and territorial R&I systems. The focus of this deliverable is to present the outline of the Transformative Experiments (TE) of Territorial RRI implemented in the 5 participating territories: Region of Emilia Romagna, Region of North East Romania, Region of Central Macedonia, County of Trøndelag, and Municipality of Gabrovo.

Territorial RRI is the responsiveness of R&I actors to the challenges of de/re-territorialisation. Through Territorial RRI, R&I actors take part in territory-making procedures in a territory, that is an ongoing and open-ended process of establishing and cultivating a new transformative relationship for territorial governance. As this process is a social and technological innovation, territorial RRI is a key element of the process as it allows access to research, science and technology. The concept of Territorial RRI, is further explained in D4.1-Working Paper on Territorial RRI and D3.3 - Map of approaches, policies and tools for Territorial RRI .

Each of the Transformative Experiments focuses on one or several RRI keys, which are:
For the **Region of Emilia Romagna**, RRI keys addressed are *Public Engagement, Science education and Inclusive Governance.* For the **Region of North East Romania,** RRI keys addressed are *Public engagement* and *Governance*. For the **Region of Central Macedonia**, the primary focus is on the RRI key of *Gender Equality*, and secondarily on the key of *Ethics.* For the **County of Trøndelag,** the main key addressed is *RRI governance*. As for the **Municipality of Gabrovo**, the primary RRI key is *Public Engagement* and the secondary key is *Science Education.*

The outline of the 5 territorial Transformative Experiments grounded in the co-design phase, which has provided a better starting point for the upcoming implementation period by engaging the relevant stakeholders in co-creation early on.

By involving stakeholders in the design of the experiments, the participating territories have been able to adjust the focus and implementation plan of the experiments, to consider the knowledge and values of the actors affected or involved by the implementation. By including more diverse knowledge and perspectives of the challenge that the experiments are to solve, as well as possible solutions, the final design of the experiments becomes more relevant and better suited for delivering long-term results.

The co-design phase started in early 2020 with the territories formulating their co-design concept note in January 2020, during which no one could anticipate that co-design activities, to a significant degree, would not be possible to be carried out face-to-face for most of the year.

Some co-design activities were carried out before the lockdowns in the respective countries, while most were planned to take place during the spring and summer of 2020. The implication of Covid-19 led to an adaptation of the co-design phase in all 5 territories, converting activities to an online format. This meant that the plans for the co-design process had to be revised according to the new circumstances. The timing of the process of converting to an online format varied between the 5 territories, due to the differences in restrictions. However, common for all 5 territories was a response to circumstances, completing physical co-design activities where possible and converting activities to online platforms and finding innovative ways of engaging stakeholders. The Covid-19 situation caused delay in this co-design phase, due to the reorganization of co-design activities, but also because the situation affected the availability of stakeholders and policymakers for the co-design. In the respective territories the covid-19 impact differed causing the timing and delay to differ between the territories. This collection of the plans of the transformative experiment therefore could not be concluded before we had final plan from all the territories.

The work done in the co-design phase, resulting in the final plans of the Transformative Experiment, serves as the groundwork for the implementation of the transformative experiment in the 5 territories. This groundwork should heighten the chance of impact in the implementation of the Transformative Experiments and trigger sustainable institutional change, beyond the lifetime of the project.

Each of the 5 territories has formulated the final plans for the Transformative Experiment which, in summary, include the following focus and specific activities:

For the **Region of Emilia Romagna:** the focus is on the systematic insertion of RRI in the design, implementation, monitoring and evaluation of RIS3 with reference to Science Education and Public Engagement. The activities planned include, defining guidelines regarding RRI and public engagement for the design of the 2021-2027 S3 strategy; defining monitoring and social impact measure of S3 strategy; and working on challenge-based innovation framework with the support of the external consultancy to define a position paper on challenge-based innovation within the framework of Territorial RRI.

For **North East Romania**: the focus is to increase the degree of involvement of local communities in the decisions regarding investments for innovation. The activities planned include a functional brokerage platform for innovations as a bridge between the local community (potential beneficiaries of innovation), facilitators and research organizations (the generators of innovations and innovation); development of a standard method (instruments) for collecting and structuring the research for innovation; thematic meetings between research and innovation stakeholders and community stakeholders.

For the **Region of Central Macedonia**: the focus is on co-designing, developing, and activating a regional Gender Equality Plan in the regional R&I field with the active engagement and collaboration of all related major actors in the region. The activities planned include identification of key individuals in regional R&I organizations for endorsing the GEP-related Declaration of Principles; monitoring the development of the S3 at the national and the regional levels; and participation in public consultations regarding the development of the S3 at the national and the regional levels.

For the **County of Trøndelag**: the focus is on increasing and improving knowledge flows between Norway's largest university NTNU and two regions that belong to the same county as the university**.** The activities planned include selection of master programs that contain internships in their programs or have other practice-oriented activities; recruit trainees among the graduates and students; identification of existing 'ambassadors', analysis of their motivations and the challenges that they meet in their work and development of a recruitment strategy for new "ambassadors".

For the **Municipality of Gabrovo:** the focus is on the Public Engagement Plan for S3 development. The activities planned include establishment of a focus group 'Economy, innovations and human capital' and identification of ideas and potential projects within the focus group; presentation of the work of the focus group to the public; development of the Gabrovo S3.

3. Co-designing the final plans for the 5 Transformative Experiments of Territorial RRI

The co-design phase is an integral part of the Territoria project, preceding the final plans of the transformative experiments for implementation in WP5. The co-design was carried out through a stakeholder engagement process, accompanied by a series of meetings and exchanges, aimed at involving all the principal actors active in the selected territorial milieu.

The kick-off of the co-design phase took place at the consortium workshop on the concept of territorial RRI in Bologna in November 2019, where the concept of territorial RRI was discussed and the framework for the concept note for the co-design phase was presented. Based on the workshop, the Working Paper on Territorial RRI (D4.1.) was delivered. After the kick-off, a template for a concept note was shared with the consortium in December 2019. The concept note served as a reflection and as a practical guideline for the co-design of the transformative experiments in each territory. In the development of the concept note, the partners could draw on the mapping of societal actors which they all carried out in WP2. After a feedback process between the territories and the Danish Board of Technology, the concept notes were finalized in January 2020 by all 5 territories.

The concept notes presented the main ideas for the transformative experiment and the specific itinerary for the activities to be carried out in the co-design process, which were:

- At least 3 preparatory bilateral meetings btw regional organization and stakeholders;
- One writeshop involving all the main territorial milieu actors;
- Draft version of the transformative experiment;
- Citizens summit for a large public to present and discuss the draft version of the transformative experiment.

The actual co-design process initialed in February 2020, with activities planned to take place during the spring and summer of 2020. In the co-design process the partnership between the academic partners and the territorial partner was strengthened. The co-design process started as the same time as covid-19 started to show in Europe. The implications of Covid-19 affected the regions to a varying degree, and a revision of the concept notes was agreed on, to clarify which activities had taken place before Covid-19, and which would need to be re-formulated and converted to online format, in line with the individual restrictions in each territory.

From the first concept note to the revised concept note, the focus remained the same for all 5 territories, however changes in the itinerary of co-design activities were made, including:

Territory	Focus of the experiment	Changes made
Region of Emilia-Romagna	• Focus is on systematic insertion of RRI into the design, implementation, monitoring, and evaluation of regional Smart Specialisation Strategy (S3) with reference to the RRI keys of Public Engagement and Science Education.	○ Writeshop: activity carried out on-line, through collaborative tools (google docs) and the co-design ensured through the participation of different actors within the Clust-ERs. ○ Draft version of Transformative Experiment: complete activity through the organization of different focus group to involve civil society organizations and social innovators during the co-design phase. ○ Citizen summit: organization of focus group, webinar and a live-debate during the R2B fair, fully on-line fair hosted by ART-ER.
Region of North-East Romania	• Focus is to increase the degree of involvement of local communities in decisions regarding investments for innovation in local areas.	○ Preparatory bilateral meetings: overall process prolonged and changed into one-on-one interviews, since online means were not considered a suitable alternative for stakeholders. ○ Writeshop: was activity changed to a collaborative drafting between ADR-NE and CEMONT because of covid-19 restrictions ○ Citizens summit: conducted in an online manner with the main stakeholders.
Region of Central Macedonia	• Focus is on designing a transformative experiment which will foster improvements in the Gender Equality key of RRI with the aim to oversee the implementation of a Gender Equality Plan to trigger institutional change within the organisations of the regional stakeholders involved, as well as by pushing for the inclusion of RRI principles in the regional Research and Innovation Strategy for Smart Specialisation (RIS3).	○ Writeshop: was converted to online using on-line tools for co-creation ○ Citizens summit: was equally converted to online, following the writeshop, and using easy to use online applications, to enforce online co-creation
County of Trøndelag	• Focus is on increasing and improving knowledge flows between Norway's largest university, NTNU, and two less populated regions that	○ Workshop transformed in a series of 7 online interviews with students, which yielded the contribution to the co-design that was originally intended

	belong to the same county as the university, which struggle to retain and attract a qualified workforce.	○ Writeshop organized online through collaborative editing of a common file. Stakeholders actively encouraged to contribute with their edits to secure co-creation.
Municipality of Gabrovo	• Focus is on a Public Engagement Plan for S3 development, with the second key challenge to be addressed being the Science Education RRI key, with the aim of achieving collaboration and interaction at territorial level among the main stakeholders	○ Preparatory bilateral meetings, two meetings converted to online surveys ○ Write-shop converted to on-line survey with open questions

Citizens Summit, Municipality of Gabrovo, June 2020

4. The impact of the co-design phase on the transformative experiments

The co-design phase has encouraged the territories to think of stakeholders in a broader sense, as societal actors with different knowledge to activate, and by considering actors that might have a more indirect influence on the process. Not limited to the typical stakeholders, such as universities, industry, and public institutions, partners also considered smaller or other societal actors, for example civil society organizations, local businesses, and citizens.

As an example, engaging other societal actors has been successful for several of the territories, including Region of Emilia-Romagna (social innovators and CSO's), Region of North East Romania (CSOs and NGOs), Region of Central Macedonia (CSOs, networks and councils), and Municipality of Gabrovo (Chambers, citizens, and NGOs).

By including different societal actors early on, and opening the co-design process, the territories have heightened the chance of stakeholder ownership in the process, as well as continuously having a two-way exchange with stakeholders during the co-design process for insight into the needs and wishes for the final plans of the Transformative Experiment.

The territories also had a unique opportunity to gain through the dialogue and co-design an understanding of where the balance for agreement and disagreement with stakeholders may lie, and where new room for opportunity and impact lies, which can be used to navigate the implementation in a fruitful and collaborative manner.

Furthermore, the co-design phase has been a way to gain an overview of where stakeholders are positioned, and which unique incentives that may drive each stakeholder towards supporting a successful project implementation. The co-design phase has, through the experiences gathered by each territory, created an overview and understanding of which parts of the implementation may need more attention and reflection, to ensure the successful implementation of the Transformative Experiment.

Due to the covid-19 situation the co-design aspect was challenged. It can be derived that had it been possible to complete the co-deign as originally planned by the territories, we would probably see more significant changes in the design of the transformative experiments, because of the co-design process. Not being able to fully engage in co-creation with stakeholders, policymakers and citizens is a loss for the process; it is in other words a lost dimension, which is hard to estimate the significance of its impact.

5. Co-design in a time of COVID-19

As the 5 territories started the co-design process in a period when no one could anticipate the implications of covid-19, the territories adapted and converted several co-design activities to an online format. The timing of the process of converting to an online format varied between the territories, depending on the differences in covid-19 restrictions. The adaptation differed in the different countries depending on the situation and need. Some co-design activities were carried out before the lockdowns in the respective countries, while most were planned to take place during the spring and summer of 2020.

In general, the covid-19 situation affected the degree of co-creation and co-design. Moving activities to online foras and the societal stress, made it difficult to carry out the co-design activities in an enhanced co-creative manner. Furthermore, the online competence and capability, including technical access, in the different territories affected the level in which a territory could complete the co-design as something more than consultation. Some territories managed to on a lower scale keep the co-design element, while other had to convert to individual interviews, which meant losing the co-design aspect.

Common for all 5 territories was a response to the circumstances – depending on the situation and how far they were in the co-design when affected by covid-19 impact, the needed changes in their co-design plans differed significantly. Below the necessary changes made in the different territories:

- The **Region of Emilia-Romagna** conducted co-design activities online through collaborative document tools and online focus groups, including a webinar open to all citizens to underline the importance of RRI in S3. Emilia-Romagna also hosted an online livestreamed debate, and efforts were made to gain access to the e-democracy and participation platform already existing in the Region, to reach more citizens, however access to the platform 'Io partecipo' was in the end not granted.

- In the **Region of North-East Romania**, co-design activities were converted to online due to the covid situation and the region conducted one-on-one consultations with main stakeholders, while also publishing the draft of the experiment plan online for public debate to heighten online interaction – for example by publishing the draft of the experiment plan on the websites of several of the local organisations involved in the project, to further heighten online interaction.

- The **Region of Central Macedonia** carried out the co-design activities through online tools and online focus groups, with the positive effect of experiencing a higher number of online participants from the Quadruple Helix than normally. This was due to an increased awareness of online tools in the public, making it easier to engage virtually in the co-design phase. Furthermore, the Region experienced that smaller meetings online allowed for discussion to be more in-depth than would otherwise be the case in larger groups.

- To ensure the co-design activities, the **County of Trøndelag** transformed a student workshop into a series of online interviews and organised an online writeshop by collaboratively editing a common file.

- In the **Municipality of Gabrovo**, some co-design activities were carried out before and between lockdowns, however converting to online included online surveys, with the results analysed, discussed, and evaluated as a resource for future regional planning. Open questions were posed in the online surveys for the respondents to easily express their ideas and present suggestions.

6. Final plans of the 5 Transformative Experiments

The final plans of the Transformative Experiments developed by the 5 territories are in brief presented in the following section, where the focus of the TE, RRI keys and concrete actions planned, are presented. The comprehensive final plans of the Transformative Experiments can be found in Appendix 1.

Region of Emilia-Romagna

Focus of Transformative Experiment

The Emilia Romagna Territorial Experiment is based on the systematic insertion of RRI in the design, implementation, monitoring and evaluation of RIS3 with reference to Science Education and Public Engagement.

- Public engagement. The experiment will develop an identification and engagement procedure of social stakeholders in S3 to create stable and not occasional dialogue and cooperation with the civil society and citizens in all S3 phases.
- (eventually) Science education. By connecting research and training policies more closely the experiment there will be an attempt try to understand how professional profiles evolve, what are the skills and training needs associated with them, what tools and actions can be put in place to meet these new needs and how to permanently insert the training actors, not only the academic ones, in this process and in the definition of the strategy and in its monitoring.

RRI keys

- Public engagement
- Science education
- Inclusive Governance

Concrete actions planned

Activity	Actors	Timeline	Impact	Success criteria
Define guidelines regarding RRI and public engagement for the design of the 2021-2027 S3 strategy	ART-ER responsible for the activity together with K&I Regional Government will draft the final version of the New S3 Strategy and will open a consultation process to wider public of regional actors, including CSOs actors and social innovators	October 2020-November 2021	Include clear guidelines on how to apply RRI and PE within the S3 implementation	Guidelines included in the Strategy on November 2021
Working on challenge-based innovation framework with the support of the external consultancy in order to define a position paper on challenge-based innovation within the framework of Territorial RRI.	ART-ER responsible for the activity together with the consultancy Regional Government and local stakeholders will have to comment the paper	October 2020 - January 2021	Define a challenge-based innovation strategy for social innovation and other thematic strands within the new S3 Regional Strategy. Define some possible measures to include within the next programming period to	Challenge-based innovation position paper published on January 2021

			support Territorial RRI in the grant schemes	
Define monitoring and social impact measure of S3 strategy	Art-ER will work with University of Bologna to define process and possible indicators Regional Government will have to include them in the S3 Strategy	October 2020 - March 2021	To include social impact measurement within the Smart Specialization Strategy and Civic Monitoring as a tool to verify social impact within grant schemes	Monitoring process defined Social impact measurement system and indicators defined
Apply the guidelines during the implementation and monitoring phases of the S3 We have to discuss possible measures and experimental calls within the new ERDF programming period.	Regional Government and local Stakeholders to define experimental patterns and measures to include Territorial RRI approach within the S3 Implementation	January - December 2021	Have at least one experimental grant scheme approved to work on Territorial RRI and social innovation involving directly Civil Society organizations in the grant application	Number of project applying to the experimental grant scheme Number of Civil Society Organizations involved in the projects

Region of North-East Romania

Focus of Transformative Experiment

The specific focus of the transformative experiment in the regions of North-East Romania is to increase the degree of involvement of local communities in the decisions regarding investments for innovation in the areas where they live. In this regard, a consultative tool will be developed to identify and prioritize innovation needs in the target communities, following the model of the focus groups of entrepreneurial discovery (EDP) organized by the North-East RDA at the regional level. At the same time, a brokerage platform for innovations will be created, as a bridge between the local community (potential beneficiaries of innovation), facilitators and research organizations (the generators of innovations and innovation), the latter being able to adapt their research topics to the requirements of the targeted mountain micro-regions (Bazinul Dornelor – Local Action Group territory from Suceava county and Ceahlau – Local Action Group territory from Neamt county).

RRI keys:

- Public engagement
- Governance

Concrete actions planned

Activity	Actors	Timeline	Impact	Success criteria
Development of a standard method (instruments) for collecting/identifying/structuring the research for innovation (e.g. interview guide for the project staff to use for direct interaction with the stakeholders).	North-East RDA / CE-MONT	January - March 2021	We are supporting the stakeholders from the target communities to structure their needs and prioritize and structure the innovation requests in such a way that it can be presented to and understood by a innovation provider. We will work on our instruments and make our desk research for this activity (e.g. project templates). Clear expression on needs in view of possibilities e.g.: established by policy instruments / supported by available or upcoming funding schemes.	- interview guide/s - project/idea template/s - questionnaire/s A well-formulated approach on how to lead the Worskhops with the stakeholders of the two LAG in order to lead to clearly formulated ideas for the brokerage platform.
Workshops with tourism and agri-food stakeholders from each of the two LAG (small meetings	North-East RDA / CE-MONT / LAGs administrations	March – June 2021	Depending on the conditions, we hope to be allowed to have meetings with	- 2 workshops with tourism stakeholders (one at the level of

according to the Covid-19 regulations for public meetings).			groups of stakeholders b ut also if the legislation will not allow public meetings we will have one-on-one meetings with representatives or other communication means.	each LAG territory) - 2 workshops with agri-food stakeholders (one at the level of each LAG territory) There will be small meetings with representatives from North-East RDA, CE-MONT, LAG administration and local tourism/agri-food stakeholders . Depending on the regulations regarding public meetings at that time (e.g. 10 persons meetings, face-to-face). The idea is that during each workshop at least one structured innovation request will be drafted.
Thematic meetings between research/innovation stakeholders and community stakeholders	North-East RDA / CE-MONT / LAGs administrations	June – July 2021	Online or face-to-face.	There will be two meetings organized between research/innovation stakeholders and local stakeholders from the two LAGs (one on tourism and one on agri-food) based also on the innovation requests drafted during the workshops.
Functional brokerage platform	North-East RDA / CE-MONT	February - June 2021	This is a more technical activity that depends on the services provided by the person/company that will develop the platform and with the support of a researcher it will have the proper content and functionality	Contract with a web developer Contract with a researcher to help design the platform and upload content
At least one ongoing RRI brokerage contract/transaction as result of the consultative tool and platform (one	North-East RDA / CE-MONT	July – September 2021	One transaction completed using the platform	One transaction completed using the platform

concrete exchange between innovation demand initiators and innovation providers, resulting in a collaborative activity).				

Region of Central Macedonia

Focus of Transformative Experiment

The RCM transformative experiment aims to introduce concrete and measurable changes in the R&I system of RCM, while making it more inclusive and response-able through RRI principles. Under more specific terms, the experiment focuses on co-designing, developing and activating a regional Gender Equality Plan in the regional R&I field with the active engagement and collaboration of all related major actors in the region. There is a high degree of R&I activities in RCM, but there is at the same time a low female representation in higher management levels of R&I in both Academia and Industry, as well as in STEM specialization that is a strategic priority of the specific region. The same underrepresentation seemingly refers to the presence of socially excluded or minority groups in all levels of R&I in both academia and industry.

The Regional Gender Equality Plan (GEP) additionally focuses on inserting RRI principles to the next regional Smart Specialization Strategy (S3). RRI dimensions and principles have the potential to enhance the quality and effectiveness of S3, and the focus shall be on potentially integrating gender equality principles as enablers within three different contexts:

1. Integration of RRI principles in the S3 process
2. By promoting new gender-related funding initiatives
3. By suggesting gender-related indicators for monitoring the results of the S3 strategy

RRI keys

- Primary key: Gender Equality
- Secondary key: Ethics (in the sense of promoting initiatives and constructing a Gender Equality Plan that also addresses minorities)

Concrete actions planned

Activity	Actors	Timeline	Impact	Success criteria
Consultation meetings with Action Group 1 (2-3 meetings in sum)	Organisations responsible: RCM, SEERC. The stakeholders participating in these meetings are the attendees of the writeshop, who afterwards decided to join Action Group 1 (focus on *Female career progression*). In this case, we allude to stakeholders from	*December 2020 – June 2021*	Through this activity, the TeRRItoria team aspires to gain more detailed insights on the GEP areas of intervention that are addressed by Action Group 1. More specifically, even more precise lines of action will be defined with reference to the following areas: *Female career progression*; *Confronting Social and Cultural*	Number of stakeholders involved in the consultation meetings Number of new emerging interventions/ lines of action *per* area of intervention

	Academia, Industry as well as some policy-makers of the region. In a similar way, we will invite the citizens who attended the citizen consultation meeting, and afterwards decided to join Action Group 1.		*Stereotypes - Challenging horizontal segregation*; *Work-life balance*; *Projection of female role models – appropriate scientific communication* *It should be noted that members of Action Group 1 will always have the opportunity to additionally provide their ideas for the areas of intervention of Group 2 (and vice versa)	
Consultation meetings with Action Group 2 (2-3 meetings in sum)	Organisations responsible: RCM, SEERC The stakeholders participating in these meetings are the attendees of the writeshop , who afterwards decided to join Action Group 2 (focus on the *Internal Regulations of the RPOs towards gender equality)*. In this case, we allude to stakeholders from Academia, Industry as well as some policy-makers of the region. In a similar way, we will involve the citizens who attended the citizen consultation meeting, and afterwards decided to join Action Group 2.	*December 2020 – June 2021*	Through this activity, the TeRRItoria team aspires to gain more detailed insights on the GEP areas of intervention that are addressed by Action Group 2. More specifically, even more precise lines of action will be defined with reference to the following areas: *Gender-aware science*; *Gender-neutral language in institutional communication and dissemination*; *Sexual harassment and gendered violence*; *Raising awareness on gender issues*	Number of stakeholders involved in the consultation meetings Number of new emerging interventions / lines of action *per* area of intervention
Informative public events/workshops/trainings (thematically organised)	Organisations responsible: RCM, SEERC The stakeholders involved refer to all Quadruple Helix actors. The citizens that already participated in the citizen consultation will be primarily invited, and RCM's and SEERC's communication channels will announce and communicate these	*Jan – July 2021*	The target aim refers to informing in more detail the wider public towards the progression of the TE, as well as on the future actions and interventions of the GEP –but with a focus on specific areas of intervention (gender themes) at a time. It is possible that new stakeholders attending the workshop will get engaged to the	Number of attendees in each workshop Achieved publicity of the events (emphasis on communication KPIs) Potential new ideas generated by the attendees, towards the content of each workshop

	events to the regional press (or even national press in the case of online workshops), so as to reach the wider public. Members of Action Group 1 and 2 will seemingly be involved, or even provide their input towards the content of these workshops.		co-implementation of the TE and provide new insights towards the gender-related content of the workshops. These workshops will finally 'exploit' and draw on the content of the aforementioned consultation meetings, aiming to enhance public engagement.	
Public presentation of a draft version of the GEP	Organisations responsible: RCM, SEERC This event will be publicly announced and communicated. All interested stakeholders of the region will be able to participate (particular emphasis on maintaining the engagement of the actors/individuals involved in the previous activities).	*Sept 2021*	This public presentation / event cont ributes to communicating the development of the RCM complete GEP ('test' version), so as to then receive the corresponding feedback towards its content. It additionally contributes to promoting the GEP to new actors and organisations (that might have not been so far engaged), thus encouraging the further endorsement of it and achieving wider awareness along with public engagement.	Number of attendees in the public event Achieved publicity of the event (emphasis on communication KPIs) Comments and feedback received on the spot by the attendees Number of new engaged actors
Collection of offline input from regional stakeholders (towards the publicly presented draft GEP)	Organisations responsible: RCM, SEERC The group of stakeholders involved in providing input will comprise the individuals attending the draft GEP public presentation (see the activity above)	*Sept – Oct 2021*	The collection of offline input towards the draft GEP aims to firstly ensure that the upcoming interventions correspond to the true needs and 'gaps' of the regional R&I organisations. Any valuable last-minute ideas may also be provided. An additional purpose for the offline feedback is to allow to the engaged actors and individuals to express their view without any time or other kind of limitations.	Number of stakeholders providing input Number of (new) comments/ideas collected Positive outcome for the GEP content, based on the input received (medium or long-term success criterion)
Identification of key individuals in regional R&I organizations for endorsing the GEP-related Declaration of Principles	Organisations responsible: RCM, SEERC The stakeholders involved throughout this step will be the key individuals potentially e ndorsing the GEP-	*June - Oct 2021*	The aim of this 'identification procedure 'is to detect the key-individuals with the 'authority' to endorse the GEP Declaration of Principles. We will attempt to approach	Number of key individuals identified in both the already engaged and new target organisations

	related Declaration of Principles (or Memoran dum of Understanding-MoU).		Individuals belonging to organisations already engaged from the previous co-design/implementation activities, or to new target organisations (not involved till this point) .	Number of key individuals agreeing on endorsing the GEP
Communication of the final version of the GEP	Organisation responsible: RCM, SEERC The GEP final version will be publicly announced and communicated. The target audience refers to all interested Quadruple Helix stakeholders and citizens of the region.	*December 2021*	This activity will actually signify the successful implementation of the RCM TE. It will further entrench and consolidate the acceptance of the GEP, since this activity entails encouraging the regional R&I organizations and the aforementioned key individuals to endorse the GEP Declaration of Principles (or MoU).	Number of organisations endorsing/supporting the GEP-related Declaration of Principles (short-term success criterion) Number of organisations practically applying the GEP interventions and lines of action (long-term success criterion)
Monitoring the development of the S3 at the national and the regional levels	Organisation responsible: RCM, SEERC (no stakeholders involved in this process)	*November 2020 – Jan 2022*	RCM and SEERC will monitor and systematically get informed on the S3 development at the national and potentially the regional levels. The rationale of this activity refers to detecting opportunities for the insertion of RRI principles to S3 processes. For instance, the S3 development shall entail some public consultation activities; the TeRRItoria team will have the opportunity to participate in such consultations and provide RRI and gender- related suggestions.	Number of opportunities detected for RRI insertion in S3
Participation in public consultations regarding the development of *the S3 at the national and the regional levels*	Organisation responsible: RCM, SEERC (no stakeholders involved in this process)	*Jan 2021 – Jan 2022*	The participation in such consultation activities consolidates the attempts towards inserting RRI in S3. In the medium or long-term, it contributes to the actual insertion of RRI principles into S3 procedures (achieving	Number of consultation activities that RCM and SEERC will join Number of suggestions provided through these consultations, with reference to the insertion of RRI and gender-related principles in S3.

			the second major impact of the TE)	Actual insertion of RRI principles into national S3 (medium or long-term success criterion)

Trøndelag County Authority

County of Trøndelag

Focus of Transformative Experiment:

The transformative experiment in the County of Trøndelag aims at increasing and improving knowledge flows between Norway's largest university NTNU and two regions, which belong to the same county as the university but are more remotely located and struggle to retain and attract qualified work force.

RRI keys

- RRI governance - the question addressed here is how to implement changes at the research and teaching level that enable positive contributions to regional development.

Concrete actions planned

Activity	Actors	Timeline	Impact	Success criteria
Selection of master programs that contain internships in their programs or have other practice-oriented activities	County council, business gardens and NTNU search in their respective networks for suitable candidates	12/2020	Narrow the focus: Not every master program at NTNU has practice oriented modules.	Have identified 2-5 suitable master programs
Recruit trainees among the graduates from the programs identified in step 1	Business gardens develop together with NTNU a recruitment strategy, which will be implemented, tested and evaluated together	02/21	Test a more targeted recruitment strategy Learn from experiences gained to implement changes in existing routines	Recruit at least one trainee from one of the master programs identified in step 1
Recruit interns among the students from the programs identified in step 1	Business gardens develop together with NTNU a recruitment strategy, which will be implemented, tested and evaluated together	02/21	Test a more targeted recruitment strategy Learn from experiences gained to implement changes in existing routines	Recruit at least one intern from at least one of the master programs identified in step 2
Identification of existing "ambassadors"[1], analysis of their motivations and the	Business gardens and county council involving their networks as source for knowledge	01/21	Learn about how to support existing "ambassadors" institutionally	Increased knowledge about "ambassadors'" role, motivations, and challenges

[1] i.e. university employees that are already engaged in ongoing collaborations between the county's more remote regions and the university.

challenges that they meet in their work Development of a recruitment strategy for new "ambassadors"	NTNU is responsible establishing contact and analysis of motivations and challenges All partners are involved in the creation of a recruitment strategy			
Recruitment of potential "ambassadors"	NTNU, County council and business gardens implement elements of the strategy developed in the previous step	02/21	Test recruitment strategies for "ambassadors"	Have identified at least one candidate who could become an "ambassador" for one of the involved regions

Municipality of Gabrovo

Focus of Transformative Experiment

With the realization of the transformative experiment, the RRI notion will be introduced in the territory among the local stakeholders. This will lead to positive growth in the involved stakeholders, making them better aware of and responsive to the territorial needs. The transformative experiment is focused upon Public Engagement Plan for S3 development.

RRI keys

- Primary key: Public Engagement
- Secondary key: Science education

Concrete actions planned

Activity	Actors	Timeline	Impact	Success criteria
Establishment of a focus group 'Economy, innovations and human capital'	Business; researchers; experts; administration; decision makers; civic society (Chamber of commerce)	September 2020	Achieve real functioning group of local actors, who are competent to contribute to the territorial developme nt	- formed focus group; - working group; - group meetings realized; - sectoral SWOT analyses discussed and completed; - ideas generated
Open public discussion realized	All of the above with additional people involved, general public, local authorities; civic society	November 2020	Achieve public response	- achieved publicity and community involvement - discussion generated; - external opinions expressed;
Identification of ideas and potential proj ects within the focus group	Business; researchers; experts; administration; decision makers; civic society (Chamber of commerce)	December 2020	Achieve defining of potential projects and outlining of the	- specific territory-bound ideas expressed; - project ideas formulated;

			territorial development in the S3 context	
Presentation of the work (of the focus group) to the general public	All of the above with additional people involved, general public, local authorities; civic society	February 2021	Achieve public response	- achieved publicity and community involvement - discussion generated; - new possible ideas to be shared; - external opinions/evaluation expressed;
Development of Gabrovo S3	Focus group members	March- December 2021	Achieve S3 development	S3 developed

Appendix 1: Final plans of the Transformative Experiments

Region of Emilia-Romagna

What is the specific focus of your transformative experiment?
The Emilia Romagna Territorial Experiment (TE) is based on the systematic insertion of RRI in the design, implementation, monitoring and evaluation of RIS3 with particular reference to Science Education and Public Engagement.

- Public engagement. The experiment will develop an identification and engagement procedure of social stakeholders in S3 in order to create stable and not occasional dialogue and cooperation with the civil society and citizens in all S3 phases.
- (eventually) Science education. In order to connect research and training policies more closely the experiment will try to understand how professional profiles evolve, what are the skills and training needs associated with them, what tools and actions can be put in place to meet these new needs and how to permanently insert the training actors, not only the academic ones, in this process and in the definition of the strategy and in its monitoring.

Please describe the challenge(s) that you seek to meet with the transformative experiment.
Emilia-Romagna Region has promoted regional innovation forum as meeting to discuss the next regional priorities for the Smart Specialization Strategy. During these meetings, many ideas and proposal have been discussed in order to make a step further in research and innovation during the next programming period. One of the emerging topic during the discussion has been the involvement of civil society and citizens in the research and innovation ecosystem, both in terms of innovation adoption and diffusion.

Due to that, the overall purpose and motivation of the TE is to find new methods and methodologies to involve civil society organizations and then citizens in taking part to the framing process of the next research and innovation framework for the Emilia-Romagna Region.

We're aware of the fact that it would be impossible to involve directly a critical mass of citizens on the topics mentioned during the forums, so there is the need to understand which is the right process to involve them in a different way, and by which tools and mechanisms.

Secondly, there is the need to take people to consider science and innovation as allied in their everyday life. This is the only way to make them understand the importance of investing in R&I.

The Territorial RRI approach can be a way to define such methodologies and tools.

In this perspective, four dimensions of responsible innovation have been identified: anticipation, reflexivity, inclusion and responsiveness. The development of Territorial RRI, then, is interpreted as a strategic framework for:

- widening the number and types of territorial actors included in R&I ecosystems;
- enhancing the capacity of territorial R&I systems to anticipate the ongoing transformations;
- activating reflexive processes in R&I governance at the local level;
- increasing thus the capacity of R&I systems to respond to the above mentioned challenges and needs set by the interplay between science and society

Do you have additional visions for the transformative experiment?
The TE is based on the following approaches:

- Social innovation as a policy: involving civil society organizations as active actors in defining priorities and R&I opportunities; involving Social economy and social innovators in the EDP process; collaborative projects to solve social challenges
- challenge-based innovation: help territories in defining their local challenges to which R&I ecosystem can submit solutions
- Transformative Innovation Policy (TIP): a new way of doing science, technology and innovation (STI) policy with global reach, research and co-creation of knowledge to meet the Sustainable Development Goals (SDGS).
- Theory of change: use methodology and tools in the execution phase and in particular as a framework for an experimental call within the thematic strand social innovation of the new S3
- Social impact management and measurement: build a sound and feasible social impact measurement system within the monitoring of the strategy and as a basis for specific measurement of projects outcomes and impacts

Which stakeholders have participated in developing the plan and how have they been involved?
The main stakeholders (power and influence on the S3 design phase) are:

- regional government responsible for the S3 design, implementation and monitoring have been involved in bilateral meeting, workshops and events to discuss about the real feasibility of implementing public engagement and science education topics within the new S3 2021-2027 strategy;
- research centers, laboratories and innovation centers have been involved in the normal stakeholder engagement process foreseen by the regional government to define the main aspects of the strategies. With some of them we discussed about public engagement topics in relation to project implementation feasibility (in the everyday project research implementation process);
- Regional Thematic Clust-ERs association (public funded private associations gathering research, industry and sometimes civil society) have been involved through the organization of webinars with their members to discuss about public engagement, social innovation, responsible innovation and social impact;

Then other and new stakeholders which have lower influence have been directly or indirectly involved:

- social innovators and third sector organizations have been involved in focus group to discuss about opportunities to work on public engagement and citizen participation to S3 implementation phase;
- Civil Society organization will be involved later during the main S3 consultation phase.

What concrete actions are planned for the transformative experiment?
Please describe them in the table below, think of the table as a step-by-step implementation plan.

Activity	**Actors**	**Timeline**	**Impact**	**Success criteria**

What is the specific activity? Please describe what you plan to do	*Which stakeholders will you involve and who is responsible for the activity?*	*When is the deadline?*	*What do you wish to achieve with the activity?*	*What are the measurable success criteria for your activity? Think about how you can assess whether your goals are achieved*
Define guidelines regarding RRI and public engagement for the design of the 2021-2027 S3 strategy	ART-ER responsible for the activity together with K&I Regional Government will draft the final version of the New S3 Strategy and will open a consultation process to wider public of regional actors, including CSOs actors and social innovators	October 2020-November 2021	Include clear guidelines on how to apply RRI and PE within the S3 implementation	Guidelines included in the Strategy on November 2021
Working on challenge-based innovation framework with the support of the external consultancy in order to define a position paper on challenge-based innovation within the framework of Territorial RRI.	ART-ER responsible for the activity together with the consultancy Regional Government and local stakeholders will have to comment the paper	October 2020 - January 2021	Define a challenge-based innovation strategy for social innovation and other thematic strands within the new S3 Regional Strategy. Define some possible measures to include within the next programming period to support Territorial RRI in the grant schemes	Challenge-based innovation position paper published on January 2021
Define monitoring and social impact measure of S3 strategy	Art-ER will work with University of Bologna to define process and possible indicators Regional Government will have to include	October 2020 - March 2021	To include social impact measurement within the Smart Specialization Strategy and Civic Monitoring as a tool to verify social impact within grant schemes	Monitoring process defined Social impact measurement system and indicators defined

	them in the S3 Strategy			
Apply the guidelines during the implementation and monitoring phases of the S3 We have to discuss possible measures and experimental calls within the new ERDF programming period.	Regional Government and local Stakeholders to define experimental patterns and measures to include Territorial RRI approach within the S3 Implementation	January - December 2021	Have at least one experimental grant scheme approved to work on Territorial RRI and social innovation involving directly Civil Society organizations in the grant application	Number of project applying to the experimental grant scheme Number of Civil Society Organizations involved in the projects

Which aspects of RRI are incorporated in the transformative experiment?

- Please also specify particular territorial RRI aspects (e.g. which "territory-making policy orientations" are taken into account? Which "territory-making governance framework" are taken into account? Which RRI keys adapted to territorial RRI are taken into account? For inspiration see. D.3.3.)
    - Public engagement
    - Science education
    - Inclusive Governance
    - Referring to D.3.3 matrix:

Governance frameworks / ***Territorial orientations***	Participative agenda setting system	Community based support structure	Territorial based exchange system	Community–led participative project	Knowledge co-creation platform	Collaborative framework between local authorities and civil society
Re-rooting economic and social activities						
Re-shaping territorial infrastructure			✓	✓	✓	
Establishing a new local regulatory framework						

Empowering territorial actors			✓	✓	✓	
Strengthening local decision making						
Territorial risk management			✓			✓

What are the challenges and barriers for the TE implementation and for achieving the intended impact(s)?

- The main barrier at the moment is the timing for implementing the experiment. The Regional Government asked ART-ER to take care of the overall co-creation process for the next S3 Agenda Setting that will involve mainly the actors always involved in the process. A consultation process will be activated at the end of the S3 design phase in order to share research and innovation priorities and thematic strands with a wider audience. At this stage, no participatory process will take place during the Strategy Design phase, but a possible "participatory" call launched through the use of the regional open innovation platform "EROI - Emilia-Romagna Open Innovation".

- Another barrier is the difficulty of research ecosystem in adopting the new approach and including RRI processes and principles in their activities, also due to lack of awareness about possible benefits and advantages in doing it.

  We will try to propose the the approach of a territorial areas RRI clubs will extend these effects to main regional R&I stakeholders. We will try to take advantage of the existing CSR programmes and associations that Emilia-Romagna Region funded within the past programming period with a view to integrate Agenda 2030 principles. We will even take advantage of the results and contacts of the "Responsible Innovators" prize which is part of the same action.

How do you plan to meet the challenges and barriers?
We're trying to define and write policy guidelines for implementing Territorial RRI within the S3 to be included in the very first draft of the 2021-2027 S3 Regional Strategy which is to be ready before November 2020. We've defined the social innovation thematic strands as a transversal one within the first draft of the strategy.

We'll work on challenge-based innovation position paper with an external consultancy expert in social innovation and local participation.

Do you need any resources or help from other partners in the project?
Understand how to really apply inclusive governance frameworks and the approaches and tools provided by WP3 within the everyday process of implementing and monitoring the S3 strategy.

Do you have additional remarks regarding the TE design and implementation process?
During the last months, the COVID outbreak and emergence had shifted the attention from our initial plan of considering RRI within the design phase of the S3 strategy. At the moment this cannot

be done due to different choices made by the regional government. So, in the design phase only a consultation process will take place instead of a participatory process to define some aspects of the strategy (mainly related to thematic strands).

Region of North-East Romania

What is the specific focus of your transformative experiment?
The specific focus of the transformative experiment in the regions of North-East Romania is to increase the degree of involvement of local communities in the decisions regarding investments for innovation in the areas where they live. In this regard, a consultative tool will be developed to identify and prioritize innovation needs in the target communities, following the model of the focus groups of entrepreneurial discovery (EDP) organized by the North-East RDA at the regional level. At the same time, a brokerage platform for innovations will be created, as a bridge between the local community (potential beneficiaries of innovation), facilitators and research organizations (the generators of innovations and innovation), the latter being able to adapt their research topics to the requirements of the targeted mountain micro-regions (Bazinul Dornelor – Local Action Group territory from Suceava county the and Ceahlau – Local Action Group territory from Neamt county).

Please describe the challenge(s) that you seek to meet with the transformative experiment.
The transformative experiment in the region of North-East Romania has the overall purpose to improve livelihoods in the North-East mountain area of Romania through adequate science and innovation approaches, by aligning the scientific research with societal values, needs and expectations.

In our territorial experiment we expect to achieve the following:

- establish ownership (and TeRRItoria project ownership) at the level of the territory, in what regards the implementation of innovation;

- matchmaking offer and demand for research & innovation;

- greater public involvement in the decision making processes concerning research and innovation for economic transformation.

We must try to attract the younger generation to consider staying in the area, carry on with traditional activities utilizing possibilities including funding opportunities.

We must try to attract people not to leave, to stop migration of people to bigger cities and keep the young generation here.

The process will not stop with the project ending – sustainability of the project.

Do you have additional visions for the transformative experiment?
By the end of the project we want to have at least one ongoing RRI brokerage contract/transaction as result of the consultative tool and platform (one concrete exchange between innovation demand initiators and innovation providers, resulting in a collaborative activity).

Which stakeholders have participated in developing the plan and how have they been involved?
The plan was mainly developed by the North-East RDA with the support of CE-MONT (Mountain Economy Centre) during direct and on-line meetings but it is based also on the answers that were received from all the stakeholders that have been consulted in the project (individual meetings using the interview guide that we designed to replace the workshop/writeshop/consultation events that were initially planned in the project but which we had to cancel because of the Covid-19 crysis). Also, we need to mention that a first meeting was organized in Vatra Dornei at the beginning of March 2020 and part of the stakeholders from LAG Bazinul Dornelor area were present and some ideas have been collected.

The number of stakeholders that have been interviewed is 61.

Cathegories of stakeholders that were involved:

- NGO/civil society: 11
- public administrations: 28
- research/university: 6
- LAG (Local Action Group): 2
- regional/national policy makers: 2
- private sector/commerce chamber: 10
- national parks: 2

The main tasks/responsibilities of the stakeholders were to identity priorities, challenges and needs for innovation or innovative solutions and offer feedback on how useful it is considered the consultation mechanism that we are using at the North-East Regional Development Agency and EDP's organized on RIS3 Strategy.

The interviews have contributed to:

- identifying the ways in which the challenges and needs faced by the target territories can be collected (and which could be solved through innovation);
- identification of the most feasible mechanisms through which the interaction between community - researchers / innovation providers could be facilitated, for: prioritization of community investments for innovation, identifying (types) of solutions to community challenges, making calls for innovation projects (and / or contracting innovation projects) resulting from these consultations (EDP type);
- providing input on how to structure the brokerage platform to facilitate interaction in a user-friendly way to all involved stakeholders.

What concrete actions are planned for the transformative experiment?
Please describe them in the table below, think of the table as a step-by-step implementation plan.

Activity *What is the specific activity? Please describe what you plan to do*	**Actors** *Which stakeholders will you involve and who is responsible for the activity?*	**Timeline** *When is the deadline?*	**Impact** *What do you wish to achieve with the activity?*	**Success criteria** *What are the measurable success criteria for your activity? Think about how you can assess whether your goals are achieved*
Development of a standard method (instruments) for collecting/identifying/structuring the research for innovation (e.g.	North-East RDA / CE-MONT	January - March 2021	We are supporting the stakeholders from the target communities to structure their needs and prioritize and structure the innovation	- interview guide/s - project/idea template/s - questionnaire/s

interview guide for the project staff to use for direct interaction with the stakeholders).			requests in such a way that it can be presented to and understood by a innovation provider. We will work on our instruments and make our desk research for this activity (e.g. project templates). Clear expression on needs in view of possibilities e.g.: established by policy instruments / supported by available or upcoming funding schemes.	A well formulated approach on how to lead the Workshops with the stakeholders of the two LAG in order to lead to clearly formulated ideas for the brokerage platform.
Workshops with tourism and agri-food stakeholders from each of the two LAG (small meetings according to the Covid-19 regulations for public meetings).	North-East RDA / CE-MONT / LAGs administrations	March – June 2021	Depending on the conditions, we hope to be allowed to have meetings with groups of stakeholders but also if the legislation will not allow public meetings we will have one-on-one meetings with representatives or other communication means.	- 2 workshops with tourism stakeholders (one at the level of each LAG territory) - 2 workshops with agri-food stakeholders (one at the level of each LAG territory) There will be small meetings with representatives from North-East RDA, CE-MONT, LAG administration and local tourism/agri-food stakeholders. Depending on the regulations regarding public meetings at that time (e.g. 10 persons meetings, face-to-face). The idea is that during each workshop at least one structured innovation request will be drafted.
Thematic meetings between research/innovation stakeholders and	North-East RDA / CE-MONT / LAGs administrations	June – July 2021	Online or face-to-face.	There will be two meetings organized between research/innovation

community stakeholders				stakeholders and local stakeholders from the two LAGs (one on tourism and one on agri-food) based also on the innovation requests drafted during the workshops.
Functional brokerage platform	North-East RDA / CE-MONT	February - June 2021	This is a more technical activity that depends on the services provided by the person/company that will develop the platform and with the support of a researcher it will have the proper content and functionality	Contract with a web developer Contract with a researcher to help design the platform and upload content
At least one ongoing RRI brokerage contract/transaction as result of the consultative tool and platform (one concrete exchange between innovation demand initiators and innovation providers, resulting in a collaborative activity).	North-East RDA / CE-MONT	July – September 2021	One transaction completed using the platform	One transaction completed using the platform

Which aspects of RRI are incorporated in the transformative experiment?

Territorial orientations:

- Re-rooting economic and social activities;
- Empowering territorial actors;
- Strengthening local decision making;

Governance frameworks:

- Establishment of a participatory agenda setting system;
- Establishment of a community-based support structure;
- Development of a territorial exchange system;
- Development of a community-led participative project;
- Development of a collaborative framework between local authorities and civil society.

Policy – operational aspects:

- Fostering a participative decision making;

- Leveraging on both formal and informal leadership and authorities;
- Relying on personal and economic commitment of involved actors;
- Leveraging on territorial natural and infrastructural resources;
- Adopting transparency in decision making;
- Creating links with national and international experiences and policies.

What are the challenges and barriers for the TE implementation and for achieving the intended impact(s)?

Resistance to change; lack of interest from the local communities; lack of involvement from the research side; possible mismatch between the project calendar and the timeline for drafting programming documents and strategies for 2021-2027 programming period; Covid-19 crisis evolution.

How do you plan to meet the challenges and barriers?

By approaching a common view regarding the project in the dialogue with both parties (research - society);

By providing best practices and show-how examples;

By offering a chance to work together in an entrepreneurial discovery process in order to identify and prioritize territorial challenges and solutions;

By having the policy actors involved (even if only as observers);

PR and dissemination at territorial level.

Do you need any resources or help from other partners in the project?
Maybe.

Do you have additional remarks regarding the TE design and implementation process?
The plan might suffer some updates considering factors that we can't predict or control, such as the restrictions caused by the Covid-19 pandemic.

Region of Central Macedonia

The specific focus of the RCM transformative experiment

The RCM transformative experiment aims to introduce concrete and measurable changes in the R&I system of RCM, while making it more inclusive and response-able through RRI principles. Under more specific terms, the experiment focuses on co-designing, developing and activating a regional Gender Equality Plan in the regional R&I field with the active engagement and collaboration of all related major actors in the region. There is a high degree of R&I activities in RCM, but there is at the same time a low female representation in higher management levels of R&I in both Academia and Industry, as well as in STEM specialization that is a strategic priority of the specific region. The same underrepresentation seemingly refers to the presence of socially excluded or minority groups in all levels of R&I in both academia and industry.

The Regional Gender Equality Plan (GEP) additionally focuses on inserting RRI principles to the next regional Smart Specialization Strategy (S3). RRI dimensions and principles have the potential to enhance the quality and effectiveness of S3, and the focus shall be on potentially integrating gender equality principles as enablers within three different contexts:

1. Integration of RRI principles in the S3 process
2. By promoting new gender-related funding initiatives
3. By suggesting gender-related indicators for monitoring the results of the S3 strategy

The challenges that are to be met with the transformative experiment

The foci of the RCM experiment are in accordance to the challenges that the region seeks to meet. As mentioned, the first challenge addressed refers to the female underrepresentation in the regional R&I field. The quantitative under-representation of females is particularly evident in 1) high authority positions in R&I organizations, and 2) in STEM-oriented institutions. Concurrently, the TeRRItoria team addresses a few other, more multi-layered issues that females and minority groups face in R&I positions. Indicatively, the regional GEP aims to meet challenges that are heavily 'linked' to:

- hiring procedures and selection criteria for R&I staff at both academic and industry level
- work-life balance conditions
- the issue of the glass ceiling in R&I
- the gender wage gap
- Stronger engagement of girls/females in STEM and in particular ICT (attempt to 'genderise' the STEM disciplines and battle against stereotypes towards all minority groups)

Additional visions for the transformative experiment

Some additional visions related to the transformative experiment refer to:

- the set up and operation of a Quadruple Helix "Action Group on R&I Gender and Social Inclusion", led by the Regions' Directorate of Innovation and Entrepreneurship with the participation of representatives of Academia, Industry and Civil Society
- particularly addressing gender issues in ICT (within the context of STEM and due to the brain drain of ICT experts in the region)
- creating new coalitions of stakeholders in the region, encompassing representatives of all Quadruple Helix categories

- bringing citizens closer to R&I systems and to S3 processes (which are often perceived as being a dialogue confined among experts)

Stakeholders participating in developing the plan (and means of involvement)
The regional stakeholders that have participated in the co-design of the TE come from the four Quadruple Helix categories. They have been engaged to the RCM TE through the different co-design activities/events:

- 3 virtual bilateral meetings per Quadruple Helix category (1: Academia/Research actors, 2: Industry, 3: Policymakers along with representatives of Society e.g. NGOs)
- 1 virtual writeshop with participation from all four helices (attendees that had already participated in the bilateral QH meetings, as well as some 'newcomers')
- 1 online public event i.e. public consultation event (attendees were comprised by citizens of the region) followed by a public survey

The aforementioned stakeholders were further engaged through the follow-up activities accompanying the above meetings/events. Google docs and questionnaires were communicated to them after the meetings, thus providing them with the opportunity to express their perspective and their ideas without any time limitations. With particular reference to the writeshop and the public consultation event, the attendees were invited to participate to two different Groups of Interest/Action groups. Action Group 1 is named *Female Career Progression*, while Action Group 2 *Internal Regulations of the RPOs towards gender equality*. The two groups encompass eight different potential areas of intervention for the upcoming GEP:

1. Female career progression
2. Gender – aware Science
3. Confronting Social and Cultural Stereotypes - Challenging horizontal segregation
4. Projection of female role models – appropriate scientific communication
5. Gender-neutral language in institutional communication and dissemination
6. Work-life balance
7. Sexual harassment and gendered violence
8. Raising awareness on gender issues

The members of these groups have been kindly asked (as a first step) to suggest potential actions/initiatives for the eight above areas, additionally to the ones discussed during the co-design meetings.

Indicatively, the stakeholders that have been so far engaged to the processes related to the RCM Transformative Experiment are:

- Academia/Research actors: Aristotle University of Thessaloniki (including AUTH Gender and Equality Committee), University of Macedonia (including the Equality Committee and the UNESCO Unit: Women, Peace and Security of UoM), International Hellenic University, CITY College, American Farm School-Perrotis College, British Council , Centre for Research and Technology-Hellas (CERTH), Q-PLAN International Advisors etc.
- Industries/ Associations of Industries: Association of ICT industries of Northern Greece (SEPVE(, Greek Exporters' Association (SEVE), SPACE HELLAS S.A., i4G S.A., Olympia Electronics S.A., Thessaloniki Chamber of Commerce and Industry (EBETH), Hellenic Business Angels (HeBAN Advocates for Growth) etc.
- Policy-Makers/Government: Region of Central Macedonia (including the Gender and Equality Committee of the RCM), Municipality of Nea Irakleia, Alexandria Municipality

- Civil-society representatives: Greek Association of Female entrepreneurs (SEGE), Representatives of Periktioni Network, INTEGRITY PACT HELLAS, ACM's Council on Women in Computing (ACM W Greece)
- Citizens

Concrete actions planned for the transformative experiment (a step-by-step implementation plan).

Activity *What is the specific activity? Please describe what you plan to do*	**Actors** *Which stakeholders will you involve and who is responsible for the activity?*	**Timeline** *When is the deadline?*	**Impact** *What do you wish to achieve with the activity?*	**Success criteria** *What are the measurable success criteria for your activity? Think about how you can assess whether your goals are achieved*
Consultation meetings with Action Group 1 (2-3 meetings in sum)	Organisations responsible: RCM, SEERC. The stakeholders participating in these meetings are the attendees of the writeshop, who afterwards decided to join Action Group 1 (focus on *Female career progression*). In this case, we allude to stakeholders from Academia, Industry as well as some policy-makers of the region. In a similar way, we will invite the citizens who attended the citizen consultation meeting, and afterwards decided to join Action Group 1.	*December 2020 – June 2021*	Through this activity, the TeRRItoria team aspires to gain more detailed insights on the GEP areas of intervention that are addressed by Action Group 1. More specifically, even more precise lines of action will be defined with reference to the following areas: *Female career progression*; *Confronting Social and Cultural Stereotypes - Challenging horizontal segregation*; *Work-life balance*; *Projection of female role models – appropriate scientific communication* *It should be noted that members of Action Group 1 will always have the opportunity to additionally provide their ideas for the areas of intervention of Group 2 (and vice versa)	• Number of stakeholders involved in the consultation meetings • Number of new emerging interventions/ lines of action *per* area of intervention

Consultation meetings with Action Group 2 (2-3 meetings in sum)	Organisations responsible: RCM, SEERC The stakeholders participating in these meetings are the attendees of the writeshop, who afterwards decided to join Action Group 2 (focus on the *Internal Regulations of the RPOs towards gender equality)*. In this case, we allude to stakeholders from Academia, Industry as well as some policy-makers of the region. In a similar way, we will involve the citizens who attended the citizen consultation meeting, and afterwards decided to join Action Group 2.	*December 2020 – June 2021*	Through this activity, the TeRRItoria team aspires to gain more detailed insights on the GEP areas of intervention that are addressed by Action Group 2. More specifically, even more precise lines of action will be defined with reference to the following areas: *Gender-aware science*; *Gender-neutral language in institutional communication and dissemination*; *Sexual harassment and gendered violence*; *Raising awareness on gender issues*	• Number of stakeholders involved in the consultation meetings • Number of new emerging interventions / lines of action *per* area of intervention
Informative public events/workshops /trainings (thematically organised)	Organisations responsible: RCM, SEERC The stakeholders involved refer to all Quadruple Helix actors. The citizens that already participated in the citizen consultation will be primarily invited, and RCM's and SEERC's communication channels will announce and communicate these events to the regional press (or even national press in the case of online workshops), so as to reach the wider public. Members of Action Group 1 and 2 will seemingly be involved, or even provide their input towards the	*Jan – July 2021*	The target aim refers to informing in more detail the wider public towards the progression of the TE, as well as on the future actions and interventions of the GEP –but with a focus on specific areas of intervention (gender themes) at a time. It is possible that new stakeholders attending the workshop will get engaged to the co-implementation of the TE and provide new insights towards the gender-related content of the workshops. These workshops will finally 'exploit' and draw on the content of the aforementioned consultation meetings,	• Number of attendees in each workshop • Achieved publicity of the events (emphasis on communication KPIs) • Potential new ideas generated by the attendees, towards the content of each workshop

	content of these workshops.		aiming to enhance public engagement.	
Public presentation of a draft version of the GEP	Organisations responsible: RCM, SEERC This event will be publicly announced and communicated. All interested stakeholders of the region will be able to participate (particular emphasis on maintaining the engagement of the actors/individuals involved in the previous activities).	*Sept 2021*	This public presentation / event contributes to communicating the development of the RCM complete GEP ('test' version), so as to then receive the corresponding feedback towards its content. It additionally contributes to promoting the GEP to new actors and organisations (that might have not been so far engaged), thus encouraging the further endorsement of it and achieving wider awareness along with public engagement.	• Number of attendees in the public event • Achieved publicity of the event (emphasis on communication KPIs) • Comments and feedback received on the spot by the attendees • Number of new engaged actors
Collection of offline input from regional stakeholders (towards the publicly presented draft GEP)	Organisations responsible: RCM, SEERC The group of stakeholders involved in providing input will comprise the individuals attending the draft GEP public presentation (see the activity above)	*Sept – Oct 2021*	The collection of offline input towards the draft GEP aims to firstly ensure that the upcoming interventions correspond to the true needs and 'gaps' of the regional R&I organisations. Any valuable last-minute ideas may also be provided. An additional purpose for the offline feedback is to allow to the engaged actors and individuals to express their view without any time or other kind of limitations.	• Number of stakeholders providing input • Number of (new) comments/ideas collected • Positive outcome for the GEP content, based on the input received (medium or long-term success criterion)
Identification of key individuals in regional R&I organizations for endorsing the GEP-related Declaration of Principles	Organisations responsible: RCM, SEERC The stakeholders involved throughout this step will be the key individuals potentially endorsing the GEP-related Declaration of Principles (or	*June - Oct 2021*	The aim of this 'identification procedure 'is to detect the key-individuals with the 'authority' to endorse the GEP Declaration of Principles. We will attempt to approach Individuals belonging to organisations already engaged from the previous co-	• Number of key individuals identified in both the already engaged and new target organisations • Number of key individuals agreeing on

	Memorandum of Understanding-MoU).		design/implementation activities, or to new target organisations (not involved till this point).	endorsing the GEP
Communication of the final version of the GEP	Organisation responsible: RCM, SEERC The GEP final version will be publicly announced and communicated. The target audience refers to all interested Quadruple Helix stakeholders and citizens of the region.	*December 2021*	This activity will actually signify the successful implementation of the RCM TE. It will further entrench and consolidate the acceptance of the GEP, since this activity entails encouraging the regional R&I organizations and the aforementioned key individuals to endorse the GEP Declaration of Principles (or MoU).	• Number of organisations endorsing/supporting the GEP-related Declaration of Principles (short-term success criterion) • Number of organisations practically applying the GEP interventions and lines of action (long-term success criterion)
Monitoring the development of the S3 at the national and the regional levels	Organisation responsible: RCM, SEERC (no stakeholders involved in this process)	*November 2020 – Jan 2022*	RCM and SEERC will monitor and systematically get informed on the S3 development at the national and potentially the regional levels. The rationale of this activity refers to detecting opportunities for the insertion of RRI principles to S3 processes. For instance, the S3 development shall entail some public consultation activities; the TeRRItoria team will have the opportunity to participate in such consultations and provide RRI and gender-related suggestions.	• Number of opportunities detected for RRI insertion in S3
Participation in public consultations regarding the development of	Organisation responsible: RCM, SEERC	*Jan 2021 – Jan 2022*	The participation in such consultation activities consolidates the attempts towards inserting RRI in S3.	• Number of consultation activities that RCM and SEERC will join

the S3 at the national and the regional levels	(no stakeholders involved in this process)		In the medium or long-term, it contributes to the actual insertion of RRI principles into S3 procedures (achieving the second major impact of the TE)	• Number of suggestions provided through these consultations, with reference to the insertion of RRI and gender-related principles in S3. • Actual insertion of RRI principles into national S3 (medium or long-term success criterion)

Aspects of RRI incorporated in the transformative experiment. (e.g. "territory-making policy orientations" "territory-making governance framework" and RRI keys taken into account)

With reference to RRI keys, the RCM experiment incorporates primarily the key of Gender Equality, and secondarily the one of Ethics (in the sense of promoting initiatives and constructing a Gender Equality Plan that also addresses minorities).

The territory-making features that are encompassed through the TE refer to:

1. The development of 'territorial awareness': Owing to the various co-design and implementation activities, awareness has been and will continue to be raised in the territory with reference to gender equality and a number of relevant gender-related issues. It should be specified that we often allude to a two-way, reciprocal awareness-raising process. On the one side, the TeRRItoria team contributes to raising territorial actors' awareness on the target topic by informing them through meetings and triggering discussions (e.g. writeshop, citizen consultation event). On the other side, the territorial actors and stakeholders themselves have the opportunity to spread knowledge among one another; particularly in the case of stakeholders already experienced with gender issues, they can further raise awareness among the TeRRItoria team regarding innovative gender activities and interventions out of the R&I sphere (which are though still relevant to our work). Ultimately, in all territorial awareness instances, a new vision based on gender equality can be created for the region.

2. The activation of a 'territorial mobilisation': Key territorial actors of the regional R&I system, as well as social actors and citizens are mobilized within the context of TeRRItoria and for co-designing and co-implementing the regional GEP. New coalitions of actors (Quadruple Helix coalitions) already emerged in RCM during the co-design and lead to a fruitful exchange of experiences, while the commitment of all these actors was heavily acknowledged.

3. The production of a territorial change for governance: This third aspect is heavily related to institutional changes, as well as to the modifications in the relationships among the key players engaged in the political, economic and social fabric of the territory. So as to achieve the aforementioned territorial change and institutional transformations, territorial actors

will be continuously involved in the experiment activities. They will concurrently undertake new tasks and roles within this context, mainly referring to co-creation and new collaborative working styles. These actors shall afterwards proceed to a set of organizational changes emerging from their exact engagement to the GEP processes (and the final endorsement of it). Their so-called 'identity structures' can be redefined, a procedure entailing positive changes in internal rules, protocols, operations and in prospective missions (operational transformation), as well as in the way these actors recognize themselves (symbolic transformation). Concrete territorial changes have thus the potential to emerge, paving the way for considerable R&I territory-making processes.

The territorial RRI aspects that are taken into account are depicted in the Matrix below.

Governance frameworks / ***Territorial orientations***	Participative agenda setting system	Community based support structure	Territorial based exchange system	Community–led participative project	Knowledge co-creation platform	Collaborative framework between local authorities and civil society
Re-rooting economic and social activities				ü		
Re-shaping territorial infrastructure						
Establishing a new local regulatory framework						ü
Empowering territorial actors	ü			ü		ü
Strengthening local decision making	ü					ü
Territorial risk management						

Challenges and barriers for the TE implementation and for achieving the intended impact(s).

The so-far engagement on behalf of regional stakeholders has suggested that Gender Equality is a triggering issue in RCM; stakeholders have been eager to participate to the co-design of the GEP, and their overall commitment and interest towards the target initiatives suggests that the TE implementation shall be successful. It has been further indicated that the upcoming GEP will be more input-driven and multi-layered than initially assumed. Our previous assumptions towards the existence of cognitive obstacles (e.g. lack of motivation and interest, misunderstanding of the term RRI etc.) have therefore begun to fade. A subtle challenge has to do with engaging citizens in particular; even though they are heavily interested on achieving gender equality in the region and

are eager to participate in relevant initiatives, most of them are reluctant towards openly expressing their related experiences and views.

Regarding the existence of operational obstacles towards the TE implementation, a newly added challenge refers to the COVID-19 pandemic. The consequent implications are mainly linked to a subtly alternated time plan and work plan (e.g. no physical events), but to a degree that does not affect the overall quality and execution of the expected GEP (and its impact).

Plans for meeting the challenges and barriers.
Mitigation activities have already been designed and applied with reference to the aforementioned challenges. Regarding the more active engagement on behalf of citizens, more events/meetings are to be realized (e.g. thematically organized Informative public events/workshops), so as to further familiarize them with the experiment context and upcoming activities. The aim is to create a familiar and motivating 'working environment' for them, where they will provide their input without hesitation.

A follow-up communication (emails, Google forms, questionnaires etc.) is concurrently evolving in a systematic way with all interested stakeholders, so as to maintain their interest and their engagement to the GEP procedures. The need for collaborative working and co-creation will continue to be emphasized.

Both RCM and SEERC have finally ensured an appropriate digital infrastructure, so as to organize interactive online meetings and events. The time plan of the TE implementation has also been revised and subtly modified for absorbing some COVID-related delays of the co-design process.

Resources or help from other partners in the project.
Mutual learning activities within the project have already proved to be useful for enriching the TE experiment. Any further exchange of experiences and lessons learnt throughout the course of the project (particularly related to citizen engagement) will thus be beneficial for the implementation of the GEP initiatives in RCM.

Additional remarks regarding the TE design and implementation process.
–

County of Trøndelag

The specific focus of your transformative experiment

The Trøndelag experiment aims at increasing and improving knowledge flows between Norway's largest university NTNU and two regions that belong to the same county as the university but are more remotely located and struggle to retain and attract qualified work force.

Challenges addressed by the transformative experiment

Graduates from NTNU are unlikely to move to the more remote regions despite a demand for qualified work force there. At the same time, these regions are losing young people that move to the city to work or get education (among others at NTNU). In more general terms, with the exception of this one-way relation in which the university acts in a parasitic way, there are few two-way connections between the university and its "hinterland", both when it comes to education and research. The experiment addresses this challenge by creating conduits through which knowledge can flow between university and regions.

Young graduates can be such a conduit, when they implement knowledge gained at NTNU by working in the region and retain relations to their alma mater. However, this presupposes that two important conditions are met: First, university education would have to include content that is relevant for the region and that therefore is easy to implement. Second, it would mean that education at a university creates relations between teachers, researchers and students that last beyond the point of graduation.

A second group identified as candidates for conduits are **students** whose university education involves mandatory internships. A growing number of departments at NTNU offer MAs that include such practice-oriented modules. Today, the majority of these practice initiatives are conducted in NTNU's immediate surroundings. If internships are organized in more remote regions, to support two-way knowledge flows the practice periods should serve the actual needs of the regional partner and at the same time be meaningfully embedded in the rest of the student's education.

The third group proposed as promising starting point in the search for conduits are what we call "**ambassadors"**, i.e. university employees that are already engaged in ongoing collaborations between the county's more remote regions and the university. Such collaborations seem to depend on the personal engagement of these actors, and little is known about their motivations and needs. More knowledge would be needed if such a role is to be institutionalised in order to support engaged individuals and enroll new ones.

Additional visions

The experiment will address the three potential conduits described above. A more comprehensive vision would be a tight network of relations through which knowledge flows as freely as possible, both between university and regions, but also between regions.

Stakeholder participation in plan development

The plan was developed in close collaboration with representatives from NTNU, the county council and the regional "business gardens" that represent local businesses. Additional actors involved represented local business associations, municipalities, and business owners.

Concrete actions

Activity	Actors	Timeline	Impact	Success criteria

What is the specific activity? Please describe what you plan to do	*Which stakeholders will you involve and who is responsible for the activity?*	*When is the deadline?*	*What do you wish to achieve with the activity?*	*What are the measurable success criteria for your activity? Think about how you can assess whether your goals are achieved*
Selection of master programs that contain internships in their programs or have other practice-oriented activities	County council, business gardens and NTNU search in their respective networks for suitable candidates	12/2020	Narrow the focus: Not every master program at NTNU has practice oriented modules.	Have identified 2-5 suitable master programs
Recruit trainees among the graduates from the programs identified in step 1	Business gardens develop together with NTNU a recruitment strategy, which will be implemented, tested and evaluated together	02/21	Test a more targeted recruitment strategy Learn from experiences gained to implement changes in existing routines	Recruit at least one trainee from one of the master programs identified in step 1
Recruit interns among the students from the programs identified in step 1	Business gardens develop together with NTNU a recruitment strategy, which will be implemented, tested and evaluated together	02/21	Test a more targeted recruitment strategy Learn from experiences gained to implement changes in existing routines	Recruit at least one intern from at least one of the master programs identified in step 2
Identification of existing "ambassadors", analysis of their motivations and the challenges that they meet in their work Development of a recruitment strategy for new "ambassadors"	Business gardens and county council involving their networks as source for knowledge NTNU is responsible establishing contact and analysis of motivations and challenges All partners are involved in the creation of a recruitment strategy	01/21	Learn about how to support existing "ambassadors" institutionally	Increased knowledge about "ambassadors'" role, motivations, and challenges

Recruitment of potential "ambassadors"	NTNU, County council and business gardens implement elements of the strategy developed in the previous step	02/21	Test recruitment strategies for "ambassadors"	Have identified at least one candidate who could become an "ambassador" for one of the involved regions

RRI aspects incorporated

The main key addressed is *RRI governance*. The question addressed here is how to implement changes at the research and teaching level that enable positive contributions to regional development.

Challenges and barriers

The main challenge and barrier anticipated is the possibility that *recruitment* of students, graduates and existing and future "ambassadors" on the side of NTNU fails or falls short of the TE's ambitions. These groups are elusive particular during a pandemic, existing "ambassadors" are very busy people and we depend on their willingness to change some of their practices. The pandemic continues and planned actions may have to be adjusted.

Meeting the challenges and barriers

We will employ four strategies to meet this challenge:

1. The focus in the recruitment of all three groups will be on aspects that we assume are in their own interest. For the graduates this is finding a job that is relevant for their education. The students and organizers of practice related modules should be interested in finding relevant internship opportunities. And the "ambassadors" should be interested in sharing their experiences and receive more institutional support.
2. We have defined relatively modest quantitative goals, which is a function of our focus on the quality and relevance of the recruited persons. In fact, we would argue that also small numbers of new trainees, interns and "ambassadors" will represent an important step into the right direction, particularly if they are producing positive effects.
3. We will heavily rely on our networks on county, regional and university level. All partners are well connected in their respective networks which should reduce risk considerably.
4. We plan for the current situation around the pandemic not to get worse, but if the situation should get worse, most the actions proposed can be followed up on digital platforms.

Municipality of Gabrovo

What is the specific focus of your transformative experiment?
With the realization of the transformative experiment, the RRI notion will be introduced in the territory among the local stakeholders. This will lead to positive growth in the involved stakeholders, making them better aware of and responsive to the territorial needs.

The transformative experiment is focused upon Public Engagement Plan for S3 development.

Please describe the challenge(s) that you seek to meet with the transformative experiment.
Gabrovo Municipality TE is be aimed at intervening on the RRI key Public engagement, as defined in the project. The second key challenge is Science education.

Public engagement is a necessary component of the territorial development. Although a number of successful initiatives, events and practices of innovative character are realized they need to be built upon, focused and deepened.

The challenge that is to be met with the experiment is directly related to the two RRI keys and refers to achieving collaboration and interaction at territorial level among the main stakeholders.

Generally considered, there is a need is to establish and deepen the existing relations among the main stakeholders (quadruple helix).

Also, to bring about the RRI notion, to create awareness about the RRI concept and to build up motivation for co-working and contributing in wider scope of representatives of the general public.

The above, need to be accompanied by exchange and sharing of innovations, solutions, achievements, all of which reflecting the territorial context and its needs.

Do you have additional visions for the transformative experiment?
The transformative experiment thus planned has the capacity to contribute to building civic society at local level, encouraging its members to be active and responsive to the territorial needs. The need of active civic society is still considerable and involving in active common work of planning and defining priorities the quadruple helix representatives will boring the added value of an activator to the societal potential.

Which stakeholders have participated in developing the plan and how have they been involved?
The Plan is the succeeding step of the already implemented co-design process. So, the main community stakeholders groups that took part in the co-design process contributed to the plan development, as well, namely:

- youth (students, university students, young people);
- business (representatives of companies form the region);
- researchers (at local, regional and national level);
- politicians and decision makers (regional governor, mayor and deputy mayors, city council members, village mayors, representatives of the national authorities at regional level);
- civic society (Chambers, citizens, NGOs).

Each representative of the above-mentioned interested community groups was provided with the opportunity to contribute to the gathering of information, opinions, ideas sharing. There were options for offering ideas and comments directly or after considering the information presented at public event in on-line form.

What concrete actions are planned for the transformative experiment?
Please describe them in the table below, think of the table as a step-by-step implementation plan.

Activity *What is the specific activity? Please describe what you plan to do*	**Actors** *Which stakeholders will you involve and who is responsible for the activity?*	**Timeline** *When is the deadline?*	**Impact** *What do you wish to achieve with the activity?*	**Success criteria** *What are the measurable success criteria for your activity? Think about how you can assess whether your goals are achieved*
Establishment of a focus group 'Economy, innovations and human capital'	*Business; researchers; experts; administration; decision makers; civic society (Chamber of commerce)*	*September 2020*	*Achieve real functioning group of local actors, who are competent to contribute to the territorial development*	*- formed focus group;* *- working group;* *- group meetings realized;* *- sectoral SWOT* *analyses discussed and completed;* *- ideas generated*
Open public discussion realized	*All of the above with additional people involved, general public, local authorities; civic society*	*November 2020*	*Achieve public response*	*- achieved publicity and community involvement* *- discussion generated;* *- external opinions expressed;*
Identification of ideas and potential projects within the focus group	*Business; researchers; experts; administration; decision makers; civic society (Chamber of commerce)*	*December 2020*	*Achieve defining of potential projects and outlining of the territorial development in the S3 context*	*- specific territory-bound ideas expressed;* *- project ideas formulated;*
Presentation of the work (of the focus group) to the general public	*All of the above with additional people involved, general public, local authorities; civic society*	*February 2021*	*Achieve public response*	*- achieved publicity and community involvement* *- discussion generated;* *- new possible ideas to be shared;* *- external opinions/evaluation expressed;*
Development of Gabrovo S3	*Focus group members*	*March-December 2021*	*Achieve S3 development*	*S3 developed*

Which aspects of RRI are incorporated in the transformative experiment?

- Please also specify particular territorial RRI aspects (e.g. which “territory-making policy orientations” are taken into account? Which “territory-making governance framework” are taken into account? Which RRI keys adapted to territorial RRI are taken into account? For inspiration see. D.3.3.)

The two components of territory making are addressed with the experiment – to modify the territory itself and to modify its governance. By introducing new approaches of interaction and common design and planning and of co-creation of the regional strategic development both aspects will be gradually modified and developed.

With the realization of the transformative experiment ‘territorial awareness’ a diverse group of actors will be involved who will collectively produce effective interpretations of the territory and its dynamics. The group will at a later stage share its vision, the identified risks and territorial potential with wider range of individuals/organised actors.

Thus through the work of the focus group and disseminating its findings to the general public, the other two steps of the territory making will be addressed – ‘territorial mobilisation’ and ‘territorial change’. The latter will be in result of the realization of the experiment, based on the findings and the increased level of public engagement - new social actors will appear who will bring about new solutions, ideas, etc. This the strategic planning of the territory will be converted into ca common ‘project’, an expression of the shared vision of the involved parties. Owing to the experiment a consolidation of the quadruple helix actors involved will be reached. The established relations will move from good cooperation into strategic involvement in decision-making concerning the territorial development.

What are the challenges and barriers for the TE implementation and for achieving the intended impact(s)?

7.1. Considering the current stage of the project implementation, the interest it provoked in the stakeholders and the involvement that was achieved, our expectations are that the overall implementation will be successful and with positive results.

The main external factor, so far, that imposed alterations to the preliminary outlined formats and timelines was the COVID 19 crisis.

Gabrovo Municipality reacted accordingly until that moment and managed to achieve maximum of the activities in the situation.

7.2. Another challenge that is possible to occur is reluctance to participate on part of the stakeholders and/or unwillingness to contribute to the planning process. The probability of this challenge, though is very low, considering the present involvement and interest on past of the stakeholders’’ community to the project issues and activities.

How do you plan to meet the challenges and barriers?

8.1. In the present stage of the project development, it can be registered that whenever necessary all the necessary measures were undertaken immediately and according to the situation, considering all the existing pros/cons. This approach is to be consistently applied further on in the project implementation, no matter what the challenges will be encountered.

8.2. We will put extra efforts to clarify the importance of the common work that need to be done for the future benefit of all the residents of the territory. We will encourage the stakeholders to share and interact exchanging opinions, expertise, capacities and good practices to ensure that the

territorial planning is a shared process and the result will reflect the common understanding of the stakeholders.

Do you need any resources or help from other partners in the project?
The exchange of ideas and good practices among the partners in the partnership proved to be a fruitful one. It would be a valuable source of motivation further on and a means of sharing and mutual learning.

Do you have additional remarks regarding the TE design and implementation process?
No.

Appendix 2: (Revised) Concept Notes for the co-design phase

Concept Note - Region of Emilia-Romagna

The main ideas for your transformative Experiment

What's the overall purpose and motivation?

(describe the challenge that you seek to meet with this experiment)

Experiment Rationale. The Emilia Romagna experiment is based on the systematic insertion of RRI in the definition and development of the Regional Smart Specialisation Strategy (S3) with particular reference to Science Education and Public Engagement.

a) Science education. In order to connect more closely R&I policies to training policies, the experiment will try to understand how professional profiles evolve, what are the related skills and training needs, what tools and actions can help to meet these new needs and how to permanently insert the training actors in defining the strategy and in its monitoring;
b) Public engagement. The experiment will develop an identification and engagement process to involve civil society and social impact organization in Smart Specialization. This should be done in order to create stable and not occasional dialogue and cooperation with the civil society and citizens in all S3 phases.

Territorial Milieu. The experiment will be carried out in the whole region. Particular attention will be paid to all the education actors, especially to secondary schools and to the "hidden societal stakeholders", or civil society organizations, meaning those societal actors that may represent relevant citizens point of view not easily and directly identifiable otherwise (e.g. the associations of patients on issues related to health and wellbeing).

Emilia-Romagna Region has promoted regional innovation forum as meeting to discuss the next regional priorities for the S3. During these meetings, many ideas and proposal have been discussed in order to make a step further in research and innovation during the next programming period. One of the emerging topic has been the involvement of civil society and citizens in the research and innovation ecosystem, both in terms of innovation design, adoption and diffusion.

Due to that, the overall purpose and motivation of the TE is to find new methods and methodologies to involve civil society organizations and citizens in taking part to the framing process of the next research and innovation policy framework for the Emilia-Romagna Region.

We're aware of the fact that it would be impossible to involve directly a critical mass of citizens on the topics mentioned during the forums, so there is the need to understand which is the right process to involve them in a different way.

Secondly, there is the need to take people to consider science and innovation as allied in their everyday life. This is the only way to make them understand the importance of investing in R&I at regional and local level.

The Territorial RRI approach can be a way to define such methodologies and tools.

In this perspective, four dimensions of responsible innovation have been identified: anticipation, reflexivity, inclusion and responsiveness. The development of Territorial RRI, then, is interpreted as a strategic framework for:

- widening the number and types of territorial actors included in R&I ecosystems and supporting the regional Clust-ER approach;
- enhancing the capacity of territorial R&I systems to anticipate the ongoing transformations, even through demand or citizen-driven innovation, co-creation processes and co-design of possible transformative scenarios;
- activating reflexive processes in R&I governance at the local level;
- increasing the capacity of R&I systems to respond to the above mentioned challenges set by the interplay between science and society.

Do you already have possible strategies or concrete actions in mind for the transformative experiment?

- Involvement of internal stakeholders (ART-ER workforce) in aligning the concept of Territorial RRI within the regional strategy yet developed and find new key stakeholders;
- Invitation of external regional experts (TeRRItoria Advisory board and other RRI-related projects) to define the process of involvement of non-usual actors for designing the new S3.
- Definition of a process which will be as more inclusive as possible. The mapping exercise took us to define a broad list of actors to involve in this process, but we are aware that it's impossible to cover all the fields of research and all the societal challenges. Trough dedicated interactive moment during the co-design phase we will briefly identify the main needs and will design the transformative experiment.
- Technical assistance from K&I in order to better define the possible engagement and design methods to co-design the transformative experiment, and in particular:
    a) bi-monthly technical assistance session at distance, the session will be dedicated to a discussion of the ongoing activities, to discuss possible emerging problems or opportunities; and to identify technical assistance needs;
    b) On-line focus group with relevant territorial organisation, including meetings with the territorial's milieu actors;
    c) on-demand support activities, i.e. actions specifically demanded by the experiments team, that can be aimed at, for example, providing information and consultancy by specialised people on issues concerning one of the 6 RRI keys.

What is the specific focus of your experiment?

The focus of the TE is: Agenda setting for the next S3, with two main declination:

- co-creation of the agenda;
- territorial engagement of different and new actors.

A change in the S3 policy design to include actors never involved before is expected. We are referring to: civil society organizations, cultural and creative industries, patients associations, social enterprises, soccial innovators, etc.

What aspects of RRI do you want to incorporate in your case experiments?

- Public engagement: finding new methods to define how to actively involve civil society organizations in setting the S3 Agenda.
- Science Education: how to properly disseminate science results and impacts within the society and frame new competences and skills supporting schemes for new jobs related to societal challenges.
- Governance: how to include civil society organizations and science education acors in the governance and measurement of R&I policies.

What do you expect to achieve in your territorial experiment?

What will be the key milestones?

Expected change. Development of a structured methodology to include the RRI principles and dimensions in the definition and development of S3. Furthermore the experiment will contribute to the definition process of the new S3 to be launched presumably during 2020.

We expect to achieve a better understanding of methods and tools to co-design research and innovation regional and local public policies through a challenge-based and citizen-driven approach.

The **Key milestones** are:

- involvement of at least 50 new actors during the S3 priorities definition and co-design phase;
- gathering of at least 10 policy recommendation.

What stakeholder profiles have a stake in this? (remember to think about stakeholders in a broader sense)

Who currently has an influence and who is outside of influence?

The main influencing stakeholders are:

- research centers;
- laboratories;
- innovation centers;
- Regional Thematic Clust-ERs association (public funded private associations gathering research, industry and sometimes civil society) ;
- training and education institutions (both public and private).

Then other and new stakeholders which have lower influence

- civil society organizations, and in particular:
    - patients associations;
    - third sector organizations dealing with health and welfare;
    - cultural associations;
    - cultural centers;
    - cultural institutions;
- social innovation centers;
- Social innovators and social enterprises

- local municipalities.

If we design a power/influence stakeholder map, we can refer to the following desired situation after the Transformative Experiment:

Power/Importance	NEW ACTORS Local municipalities Local enablers second-level associations Living labs (Keep satisfied)	Regional government and Departments R&I actors (HTN and Clust-ERs) Fablabs and incubators (Manage Closely)
		Citizens (Keep informed)
	Influence	

What challenges and barriers for achieving your impacts do you foresee?

How do you plan to meet the challenges and barriers?

- The main barrier is the timing for the co-design and experimental phase. The Regional Government asked ART-ER to design the co-creation process for the next S3 Agenda Setting through a participatory process.

For overcoming this barrier we will start the co-design process on January 2020, with a first meeting with academia and the research ecosystem in order to show the approach of the co-design and define together with them which key stakeholders and actors involve in the process.

Then, we will start as soon as possible to design the public consultation procedure through a regional platform called “IoPartecipo+” and through the use of the regional open innovation platform “EROI - Emilia-Romagna Open Innovation”.

- Another barrier is the inclination of research ecosystem in adopting the new approach and include RRI processes and principles in their activities.

We will try to organize capacity building and knowledge exchange seminars and events in order to make R&I ecosystem of the RRI approach.

We will try to take advantage of the existing CSR programs that Regione Emilia-Romagna funded (Local laboratories for CSR, lead by local municipalities) within the past programming period with a view to integrate Agenda 2030 principles.

We will even take advantage of the results and contacts of the “Responsible Innovators” prize which is part of the same action.

What exchanges and synergies with other territories might support you best during the co-design process? To be defined.

Itinerary of co-design

Activity type	Preparatory bilateral meeting 1: Paving the way to institutional change
What will you specifically do?	Launch of the TeRRItoria project at local level during a research meeting about the social impact of research and innovation. During this meeting we will briefly discuss the main points emerged.
How will the respective co-design activities help define the case experiment?	This activity will help to define some of the specific issues related to the two defined sectors for the experimentation. We will ask to research and innovation stakeholders if they have never involved CSOs within their research project in order to take care of societal emerging issues in defining their research and innovation strategies and projects.
Who are the actors involved?	Regional Government Regional Thematic Clust-ERs association (private associations gathering research, industry and sometimes civil society)
What is the timing?	28 January 2020
Who is responsible?	ART-ER
Update June 2020	
Has the activity been completed as foreseen before COVID-19?	Yes
Do you plan to complete the activity by July 2020? If so, - what are the changes foreseen to complete the activity? - how is co-creation ensured?	
Do you plan to postpone the activity until after July 2020, and if so, do you have any indication of when the activity could be realized?	

- what are the changes foreseen to complete the activity? - how is co-creation ensured?	

Activity type	<u>Preparatory bilateral meeting 2: Defining S3 priorities and thematic strands</u>
What will you specifically do?	ART-ER is coordinating the first draft of the S3 strategic plan of the Emilia-Romagna Region, and it has identified some specific thematic strands. Within this process, Clust-ERs have been involved in indicating specific enabling technologies and processes for each thematic strands and drafting a first version of the priorities for the S3 strategy. The RRI dimension is adopted as a general principle to design the regional strategies
How will the respective co-design activities help define the case experiment?	The co-design activity help to define a collaborative methodology to draft the first version of the S3 strategy to be adopted during the experiment.
Who are the actors involved?	Regional Government Regional Thematic Clust-ERs association (private associations gathering research, industry and sometimes civil society)
What is the timing?	February 2020
Who is responsible?	ART-ER
Update June 2020	
Has the activity been completed as foreseen before COVID-19?	Yes
Do you plan to complete the activity by July 2020? If so, - what are the changes foreseen to complete the activity? - how is co-creation ensured?	
Do you plan to postpone the activity until after July 2020, and if so, do you have any indication of when the activity could be realized? - what are the changes foreseen to complete the activity? - how is co-creation ensured?	

Activity type	Preparatory bilateral meeting 3: thematic strands approval
What will you specifically do?	Show to the regional government the results of the first collaborative draft of the S3 strategy
How will the respective co-design activities help define the case experiment?	Definition of RRI key aspects to be included in the strategy
Who are the actors involved?	Regional Government
What is the timing?	25 February 2020
Who is responsible?	ART-ER
Update June 2020	
Has the activity been completed as foreseen before COVID-19?	Yes
Do you plan to complete the activity by July 2020? If so, - what are the changes foreseen to complete the activity? - how is co-creation ensured?	
Do you plan to postpone the activity until after July 2020, and if so, do you have any indication of when the activity could be realized? - what are the changes foreseen to complete the activity? - how is co-creation ensured?	

Activity type	Writeshop with territorial milieu – Intercluster approach
What will you specifically do?	ART-ER will define the methodology and the process to guide the writeshop. ART-ER will draft two documents to be completed by Clust-ERs associations related to the specific thematic strands in order to gather proposals. ART-ER will draft a second version of the S3 strategy after the writeshop and will share it within the regional research and innovation ecosystem.
How will the respective co-design activities help define the case experiment?	Definition of a writeshop methodology which is partly on-line, involving people through the regional open innovation platform EROI and partly on-site, through intercluster meetings to work on specific thematic strands.

Who are the actors involved?	Regional Government Regional Thematic Clust-ERs association (private associations gathering research, industry and sometimes civil society) Subscribers of the EROI platform (students, researchers, entrepreneurs, etc…)
What is the timing?	February-April 2020
Who is responsible?	ART-ER
Update June 2020	
Has the activity been completed as foreseen before COVID-19?	No
Do you plan to complete the activity by July 2020? If so, - what are the changes foreseen to complete the activity? - how is co-creation ensured?	The activity has been done completely on-line, through collaborative tools (google docs). The co-creation is ensured thanks to the participation of different actors within the Clust-ERs which have been involved by each single Clust-ER in giving advices and suggestions to the documents.
Do you plan to postpone the activity until after July 2020, and if so, do you have any indication of when the activity could be realized? - what are the changes foreseen to complete the activity? - how is co-creation ensured?	

Activity type	<u>Draft version of TE</u>
What will you specifically do?	Editing of a draft version of the Transformative Experiments
How will the respective co-design activities help define the case experiment?	Define how to include territorial RRI aspects, with the particular focus of science education and public engagement, within the S3 strategy definition. This part of the process will benefit of the writeshop results.
Who are the actors involved?	Regional Government Regional Thematic Clust-ERs association (private associations gathering research, industry and sometimes civil society)
What is the timing?	April-May 2020

Who is responsible?	ART-ER
Update June 2020	
Has the activity been completed as foreseen before COVID-19?	No
Do you plan to complete the activity by July 2020? If so, - what are the changes foreseen to complete the activity? - how is co-creation ensured?	We plan to complete the activity through the organization of different focus group to involve civil society organizations and social innovators during the co-design phase. The co-creation is ensured through 3 to 4 focus group to be held during the next days for shaping some RRI aspects related to the new S3 agenda.
Do you plan to postpone the activity until after July 2020, and if so, do you have any indication of when the activity could be realized? - what are the changes foreseen to complete the activity? - how is co-creation ensured?	

Activity type	Citizens consultation (50-70 people)
What will you specifically do?	Instant Polling during the R2B fair main events Workshops during the R2B fair Dedicated event during the R2B fair Maybe it will be possible to structure a survey on the regional participation platform, IoPartecipo+
How will the respective co-design activities help define the case experiment?	Take care of specific societal approach to Research and Innovation policies through the involvement of citizens in defining regional thematic strands
Who are the actors involved?	Regional Government Regional Thematic Clust-ERs association (private associations gathering research, industry and sometimes civil society) Civil Society Organizations Participants of the regional “Pact for work” and “Pact for Youth” assembly
What is the timing?	June 2020, during the annual Research and Innovation fair (TBC)
Who is responsible?	ART-ER

Update June 2020	
Has the activity been completed as foreseen before COVID-19?	No
Do you plan to complete the activity by July 2020? If so, - what are the changes foreseen to complete the activity? - how is co-creation ensured?	We will change the whole activity, since we have noticed it's not possible at the moment for us to held a citizen consultations, which is foreseen buy the Regional Government at the very end of the process. Due to this, we are organizing focus group as mentioned in the previous activity to ensure the co-creation dimension. We will even organize a dissemination webinar during June-July 2020 open to all citizens to understand the importance of RRI in S3. Last, we will organize a live-debate during the R2B fair which 2020 edition is provided through on-line and on-demand tools. We hopefully think to gather some suggestions through this channel, but it will be the first time for ART-ER to host a fully on-line fair so we're not sure about outputs and outcomes of this activity.
Do you plan to postpone the activity until after July 2020, and if so, do you have any indication of when the activity could be realized? - what are the changes foreseen to complete the activity? - how is co-creation ensured?	We will try to use the e-democracy and participation tools provided by Emilia-Romagn Region during the last phases of the experiment, since they're going to change the platform. This part of activity should necessary be postponed after July 2020 and will be taken as a verification means of the experiment. We foresee to start this activity on February 2021.

Concept Note – Region of North-East Romania

The main ideas for your transformative Experiment

What's the overall purpose and motivation?
(describe the challenge that you seek to meet with this experiment)
To improve livelihoods in the North-East mountain area of Romania through adequate science and innovation approaches, by aligning the scientific research with societal values, needs and expectations.

Do you already have possible strategies or concrete actions in mind for the transformative experiment?

We will organize a series of EDP focus groups in the pilot communities in order to assess the needs and expectations of the population, the need for innovation and the openness to it of the private environment, as well as the readiness of research entities to deliver the expected knowhow.

We will facilitate and moderate the dialogue between research and society (including public, private, and NGO entities) with the aim to find and prioritize challenges and solutions that, put together, might develop into innovative projects.

Based on the findings, on the status and potential of the innovation ecosystem, we will develop a brokerage platform as a match-making instrument between the local community (potential beneficiaries of innovation), facilitators and research organizations (generators of innovation), the latter being able to adapt their research topics to the real requirements of the targeted micro-regions.

What is the specific focus of your experiment?

To increase the degree of involvement of local communities in the decisions regarding investments for innovation in the areas where they live. In this regard, a consultative tool will be developed to identify and prioritize innovation needs in the target communities, following the model of the focus groups of entrepreneurial discovery (EDP) organized by the North-East RDA at the regional level, in the period 2017-2018. At the same time, a brokerage platform for innovations will be created, as a bridge between the local community (potential beneficiaries of innovation), facilitators and research organizations (the generators of innovations and innovation), the latter being able to adapt their research topics to the requirements of the targeted micro-regions.

What aspects of RRI do you want to incorporate in your case experiments?

Public engagement + Governance.

To establish public engagement under the governance framework, by:

- Establishment of a participatory agenda setting system;
- Establishment of a knowledge brokering platform.

What do you expect to achieve in your territorial experiment?

Establishing ownership (and TeRRItoria project ownership) at the level of the territory, in what regards the implementation of innovation.

Match-making offer and demand for research & innovation.

Greater public involvement in the decision making processes concerning research and innovation for economic transformation.

What will be the key milestones?

To be set during the co-design! Expected milestones:

1. 1st draft of the architecture of the Innovation Brokerage Platform (IBP);
2. Resolution(s) regarding the innovation needs and innovation/research offer;
3. Setting up IBP;
4. Formalizing the adoption of the consultative tool/instrument;
5. Designating the body to manage the platform;
6. Uploading territorial demand for innovation;
7. One brokerage (i.e. one concrete exchange between innovation demand initiators and innovation providers, resulting in a collaborative activity).

What stakeholder profiles have a stake in this?
(remember to think about stakeholders in a broader sense)
Researchers, authorities & local authorities, **entrepreneurs**, local action groups (LAGs), CSOs & NGOs;

Who currently has an influence and who is outside of influence?

High influence: Centre for Mountain Economy (Research body of the Romanian Academy), National Agency for Mountain Area (public authority), LAGs

Low influence: entrepreneurs, small companies, associations of producers, individual farmers/producers

What challenges and barriers for achieving your impacts do you foresee?

Resistance to change; lack of interest from the local communities; lack of involvement from the research side; possible mismatch between the project calendar and the timeline for drafting programming documents and strategies for 2021-2027 programming period.

How do you plan to meet the challenges and barriers?

By approaching a common view regarding the project in the dialogue with both parties (research - society);

By providing best practices and show-how examples;

By offering a chance to work together in an entrepreneurial discovery process in order to identify and prioritize territorial challenges and solutions;

By having the policy actors involved (even if only as observers);

PR and dissemination at territorial level.

What exchanges and synergies with other territories might support you best during the co-design process?

- Still to be considered! At this point we just say that Trodelag Business Garden is an interesting initiative, Open Innovation Platform from Regione Lombardia as well; related to mutual learning (WP7) – RDAs from Turkey and Finland. It is quite difficult to have synergies and exchanges with initiatives identified during WP3. Those initiatives presented in the WP3 deliverables might help as inspiration but doesn't match our experiment.

Itinerary of co-design

Activity type	Preparatory bilateral meetings
What will you specifically do?	Introduce the project, the concept of RRI, concepts of re/de-territorialization, the goal and foressen outcome of the experiment, to all relevant stakeholders identified during mapping exercise
How will the respective co-design activities help define the case experiment?	Since our pilot area is focused on 2 micro-regions these meetings will take place in both of them. Probably one in the territory of LAG Ceahlau (Ceahlau – Damuc target area) and two of them in the area of LAG Bazinul Dornelor. One of the two meetings that will take place in Vatra Dornei will focus more on research stakeholders and with the focus to draft a partnership between Ce-Mont (research centre for mountain economy) and other research bodies and universities from the North-East region (and beyond). The other two meetings will follow the structure on the EDP and will involve quadruple helix actors in order to prioritize challenges and to identify possible solutions to them.
Who are the actors involved?	Quadruple helix, according to the mapping
What is the timing?	February – April 2020
Who is responsible?	North-East RDA

Update June 2020	
Has the activity been completed as foreseen before COVID-19?	The activity has been mostly completed, but due to COVID-19 pandemic it was impossible to hold face-to-face meetings and interviews making the process more complicated and longer. Almost all of the planned bilateral meeting had to be changed into one-on-one interviews, since online means were not considered a suitable alternative for stakeholders. The interviews were performed under predesigned guidelines making the process reproducible and leading to change in the evaluation of outcomes in this phase. Moreover, due to time constraints coming from performing one-on-one interviews not all envisioned stakeholders could have been contacted. The contacted stakeholders include key actors of the quadruple helix: policy makers, Local Action Groups, communal governments, local producers, civil societies. The academics are planned to be contacted in forthcoming months.
Do you plan to complete the activity by July 2020? If so, - what are the changes foreseen to complete the activity? - how is co-creation ensured?	The need to change from co-creation bilateral meetings to one-on-one interviews has two main impacts on the process: 1) Interviews are much more time consuming compared to bilateral meetings. This has led to prolongation of this phase of the co-creation process. 2) Due to interviews having predefined guidelines and their one-on-one nature some expected co-creation aspects of this phase of the experiment are somewhat compromised.
Do you plan to postpone the activity until after July 2020, and if so, do you have any indication of when the activity could be realized? - what are the changes foreseen to complete the activity?	The overall process has been prolonged and should be completed trustfully by the end of the summer including the evaluation of interviews.

- how is co-creation ensured?	

Activity type	Writeshop
What will you specifically do?	Will synthetize the main ideas resulted during the bilateral meetings in order to have a draft design of the experiment according to the real expectation of those involved in the process. Now both the needs for knowhow/research/innovation and the existing and potential offer to deliver these will be analyzed and compiled.
How will the respective co-design activities help define the case experiment?	Prioritization Commitment of the main stakeholders that will be involved in the experiment
Who are the actors involved?	The main actors active in the territory, the ones active during the previous meeting
What is the timing?	May 2020
Who is responsible?	North-East RDA
Update June 2020	
Has the activity been completed as foreseen before COVID-19?	The activity has been changed to a collaborative drafting between ADR-NE and CEMONT because of the constraints from pandemic. Moreover, due to the delays in performing meetings and interviews as well as local elections the drafting will be done at the beginning of November.
Do you plan to complete the activity by July 2020? If so, - what are the changes foreseen to complete the activity? - how is co-creation ensured?	Delays resulting from slower method of contacting stakeholders (interviews instead of meetings) and unavailability of people during the election period (September-December) lead the task to be prolonged until end of December.
Do you plan to postpone the activity until after July 2020, and if so, do you have any indication of when the activity could be realized? - what are the changes foreseen to complete the activity?	All data collected through interviews will be centralized by ADR Nord-Est and analysed together with the help of CEMONT Vatra Dornei. Which will be followed to design of 1st draft of the TE. The draft will be further discussed with ESF.

- how is co-creation ensured?	The final first draft should be finished by the end of December.

Activity type	Citizen consultation
What will you specifically do?	Organize a large event where beyond the main actors involved in the co-design, other actors may come on board or simply have the chance to share their view on the draft of the territorial experiment.
How will the respective co-design activities help define the case experiment?	The goal of the consultation is to generate commitment and ownership.
Who are the actors involved?	Societal actors as well as some of the ones involved in the previous co-design activities, local population, representatives of the local councils as well as quadruple helix actors that are not influencing the co-design but are affected by it.
What is the timing?	June 2020
Who is responsible?	North-East RDA
Update June 2020	
Has the activity been completed as foreseen before COVID-19?	Due to imposed restriction organization of the public event was impossible. In addition, current trends of the pandemic in Romania suggest "second wave" of infections making it likely that the restrictions on events to be left in place. There is a high chance that a public consultation event may not be organized before the implementation phase of the project. Therefore, one-on-one consultations will be organized instead, with representatives of the main categories of stakeholders. Also, the draft of the experiment plan will be published online, for public debate, on the website of one or more organizations involved in the project locally.
Do you plan to complete the activity by July 2020? If so, - what are the changes foreseen to complete the activity?	Due to delays coming from the one-on-one interviews and further drafting of the experiment the consultation activity can be started only after summer.

- how is co-creation ensured?	
Do you plan to postpone the activity until after July 2020, and if so, do you have any indication of when the activity could be realized? - what are the changes foreseen to complete the activity? - how is co-creation ensured?	Due to the restrictions (re local Covid-19 situation) being still in place, the consultation on the draft experiment design will be made in an online manner with the main stakeholders. The initial draft will be shared for inputs with stakeholders. During the co-creation phase, most of the contacted stakeholders have expressed their interest in participating in the experiment (creation and implementation). It is important to note that municipal election planned for June were postponed until September (with possible changes at the level of the local authorities). Also, national elections are scheduled for December 6th, 2020. The result of both elections may have an impact on the final co-design and implementation, due to the potential need of a reassessment of the local authorities and of their interest in the project. Nonetheless, public authorities represent only a part of all stakeholders that would be involved, making the process robust. By the end of October, the situations post-elections should relax and allow to reestablish contact with governing authorities. Moreover, the possible methodologies (remote ones) of reaching various communities in remote areas are being researched.

Ref. – territorial presentation from mid-term review meeting (7.07.2020)

INITIAL APPROACH

(a) At elast 3 bi-lateral meetings within the target territories
(2 LAGs from NE Romania's mountain area)

(b) 1 Writeshop → Draft of TE implementation plan

(c) 1 Public consultation event → Debate on TE draft plan

IMPLEMENTATION

(a) Bi-lateral meetings

- 22 July 2019, 6 March 2020 – LAG Bazinul Dornelor
- 24 Sept 2019 – LAG Ceahlau

17 March – present : COVID-19 pandemic
Telework, travel and meeting restrictions, public events forbidden or limited

Remaining bi-lateral meetings replaced with:

- **one-on-one interviews** (online meetings are not considered a suitable alternative for our stakeholders), *(June-July 2020)*
- with selected stakeholders (4 helix)
- standard interview guidelines designed according to WP4 objectives (ADR Nord-East)
- **info collected from regional EDP (online) consultations & focus-groups in RIS3 Nord-Est areas**

(April-July 2020)

- Territoria stakeholders invited to Agri-food & Tourism EDP events (online consultations and focus-groups) – July 2020
- **research diaries** document the experience of this period (TBF)

(b) Writeshop replaced with:

- **Data collected** and **centralized** by ADR Nord-Est, then **analysed** together with the main research stakeholder from the target territory – CEMONT Vatra Dornei (institute of the Romanian Academy)
- **Design a first Draft of the TE Plan** – by North-East RDA & CE-MONT (local scientific stakeholder)
- **Discussion with the ESF** on the Draft of the TE Plan
- **1st review** of the Draft of the TE Plan, according to collected feed-back

(October – *December 2020*)

(c) 1 Public consultation event → Debate on 1st Draft of the TE, replaced with

- **public consultations** on the Draft of the TE implementation plan **(one-on-on interviews** with main stakeholders and online publication in view of debate)
-
- **2nd review** of the Draft of the TE Plan, according to collected feed-back
- → TE final concept and implementation plan

(*December 2020*)

RISKS & DELAYS

- **COVID-19 situation – pandemic evolution is still unpredictable.**
- Romania's situation is still not good, restrictions may not be loosen further more in the coming period
- **Romania's local elections – 27'th of September 2020** (provided pandemic evolution will allow it)
- **Romania's national elections – 6'th of December 2020** (provided pandemic evolution will allow it)
- A reassessment of local authorities interest in the project will be necessary → possible delay in TE implementation
- However, public authorities = 1/3rd of local stakeholders, so impact should not be major. No forecast for any big political changes.

Concept Note – Region of Central Macedonia

The main ideas for your transformative Experiment

What's the overall purpose and motivation?
(describe the challenge that you seek to meet with this experiment)

The main challenge of the transformative experiment in RCM is to give a boost to the dialogue among the R&I ecosystems towards a gender equality business approach. The experiment will be based on the adoption of Territorial RRI measures in order to trigger an institutional change within the regional stakeholders involved.
A sub-challenge could be to better understand how the current environment has been formed due to the brain-drain of ICT experts and the limited involvement of women in STEM, while, in parallel, investments in high technology are currently having a noticeable presence in the territory.
As a sub-challenge, we are also, aiming to use RRI to enhance the effectiveness and quality of the RIS3 Strategy through the critical involvement of key R&I stakeholders. The revision of the RIS3 Strategy is the first political target. The existing strategy has no references to the RRI principles, so it would be a big step to achieve some influence in the verbal of the strategy revision, for example it could be pointed that the economic growth could be complied or enhanced by social/ethical indicators. This could open the road to have stronger intervention in the next strategic document of the RIS3.
The strategic document of the next RIS3 can proceed to integrating gender equality principles within three different contexts:
1) In a theoretical context, where a 'Declaration of Principles' shall be included in the official S3 document and shall mention that gender issues and gender equality principles will be taken into account in the S3 strategy.
2) In the context of establishing new gender indicators for funding new initiatives.
3) In the context of adopting gender indicators for monitoring the results of the S3 strategy.
In more details, we will be able to proceed to setting gender equality principles as a prerequisite in several procedures. Based on the objectives of the RS3 strategy, as they are expressed in the present and more recent document, gender equality principles can be firstly seen as a prerequisite for the development of the fields of primary and horizontal development; the relevant RIS3 aim is after all described as to maintain and enhance the human capital in the fields that can develop innovative traits. Therefore, the fields/sectors that are going to be seen as the most important in the next programming period can be 'committed' to have, for example, an almost equal representation of male and female workforce, provide work-life balance measures for their (fe)male employees, or ensure fair and unbiased hiring and selection procedures. This how the maximum potentials for acquiring a skillful human capital are actually enhanced. In addition, while combing the RRI keys of gender equality and ethics (which is the secondary key of the RCM experiment), the necessity for a fair treatment of minorities/vulnerable groups could also be highlighted in the priority fields of the next S3. Finally, since S3 depicts the territory's vision on the future of Research & Innovation in RCM, the RRI key of 'gender' can be set as a criterion for supporting new research initiatives and the production of new knowledge. Such a criterion can be twofold; on the one hand, it refers to a strong representation of female engaged researchers, while on the other hand it refers to gendering the content and methods of research per se. Regarding the monitoring of the S3 results, emphasis can be paid on how many new female employees were selected/hired in the investments/initiatives related to S3 , and especially how many female scientists/researchers.

Do you already have possible strategies or concrete actions in mind for the transformative experiment?

The initial actions will be oriented on the selection and engagement of the stakeholders. As an innovative approach, the experiment, will be based on the principals of "Open Society" (in the sense of democratic and liberal principles that also encompass gender equality principles) and "Open Science"; in other words, on participatory co-design by integrating the input provided by actors belonging to the Quadruple Helix Means for contacting the relevant stakeholders at an initial stage shall be emails or phone calls, explaining to them the content of the transformative experiment and their potential roles. In the case of some stakeholders (such as CERTH, SEGE, AUTH, Urenio etc.) we actually refer to a follow-up communication, since the primary efforts for approaching have already been realized (see second-to-last question). Then, focus groups and workshops will be implemented in order to include as many possible or impossible/alternative actors. On the basis of the implementation of ONLINE S3 projects and other projects, as well as the entrepreneurial discovery procedure of the RIS3, we are quite familiar on bringing stakeholders together to discuss on issues of their knowledge, or challenging issues, so as to gradually expand the network of stakeholders.

The concreate action for binding the involved stakeholders would be the co-development of a gender equality plan as a broader strategy and the set-up of a Quadruple Helix Action Group on R&I Gender and Social Inclusion. Ideally, the Action Group could be advised /consulted by a Female Ambassador, who shall be familiarized to gender issues and shall have already developed a relevant network. Some individuals are already under consideration for undertaking this role, such as the director the Gender and Equality Committee of the Aristotle University –involving this regional actor would be after all considered as crucial- or a representative of the ACMW Women in Computing Council.

The design of the **Gender Equality Plan** will have the following steps:

1. Conducting impact assessment / audits of procedures and practices (resembling to a self-assessment and/or peer assessment) to identify gender bias in the organizations/institutions that are going to participate in the GEPs

2. Identifying innovative strategies to correct any bias

3. Setting targets and monitoring progress via indicators

Specific types of interventions are going to be analyzed and specified, such as the collection of sex-disaggregated data and the assessing of processes and practices with a view to detect gender inequalities in the organizations potentially participating in the GEPs. The next phase will include the definition of the objectives by the stakeholders, the proposition of resources, the allocation of responsibilities as well as agreement on milestones and timelines. After the internal gender-related situation and the objectives of the participating organizations have been identified, the profile of each organization needs to be considered as well (e.g. size, availability of resources etc.).Then, the measures embedded in the GEPs will be developed (as mentioned, self-tailored to the needs of each organization).

Some indicative objectives and corresponding measures/strategies that can be developed and promoted are:

1) bias-free recruitment

- training on gender issues to the individuals involved in the recruitment procedures

2) female career progression and retention

-training and encouraging young female researchers to apply for research funds

- developing counseling and monitoring services for female staff (consultation for developing their career plans)

3) promoting gender-aware science

- genderisation of teaching curricula (e.g. introducing themes referring Gender Equality in science in BA, MA/Msc or PhD studies of participating universities)

- genderisation of scientific contents and methods and research programmes etc.

4)raising awareness within the organisation on gender issues (sometimes accompanied by training)

- organizing relevant workshop and awareness-raising events (e.g. informing on unconscious gender bias, or on the processes of integrating gender in research methods)

5) promoting female leadership in scientific communication

- projecting and promoting the work and career of successful female scientists (through relevant documentaries and blog/institutional website posts, or by inviting successful female scientists to events hosted by the participating organisations etc.)

6) gender sensitive (or inclusive) institutional communication and dissemination

- development of guidelines and language protocols towards the staff of the organizations, for employing gender inclusive language

-providing the staff members with relevant tools (e.g. spell-checking programs)

7) gender balance in decision-making

-measures for an active participation of females in the decision-making processes of the organizations

- promoting decision-makers' institutional engagement on gender equality (e.g. through a Gender Equality Committee or Unit/office)

8) employing or scrutinizing already existent gender equality resources and initiatives within the organization

The Gender Equality Plan will give the opportunity to the Region of Central Macedonia to act as a pioneer in Responsibility and Innovation Equality in the public sector by integrating Equality and also adopting relevant principles.

What is the specific focus of your experiment?

The experiment will value the RRI as a process of implementation based on inclusion. Therefore, we will work, principally, on how STEM could be more attractive to women by establishing priorities for building the proper environment, how the R&I ecosystem could initiate equality-

based rules on issues like leadership, work life balance, early career development, “glass ceiling” etc.

What aspects of RRI do you want to incorporate in your case experiments?

The Territorial Experiment in RCM is developed as an intervention related to the RRI key of Gender Equality, and will make a special path for promoting anticipation as a general basis in the goal of improving the gender equality status in the R&I ecosystem. The experiment will target on inclusiveness as an aspect of new potential in growth, as well as on strategies favoring responsiveness and reflexivity -in which the organizations will be strongly supported to invest.

The experiment will focus horizontally on territorial awareness, mobilization and new configuration of actors. Especially in relation to the configuration of new actors, this why we will attempt to bring together regional actors that belong to different types of the Quadruple Helix model, and foster new collaborations among them.

What do you expect to achieve in your territorial experiment?

The transformative experiment in RCM is oriented towards bringing diversity into the narrative of RRI in the territory and on sharing with the local communities the specific territorial challenges of gender equality and female underrepresentation in the R&I community.

The involved academic, research, industrial or social organizations are aimed to make steps on organizational innovation with RRI aspects and share a realistic commitment to a common co-created framework.

The overall ambition of our experiment would be to form a more open, inclusive and democratic society, with the R&I actors as pioneers, that go beyond the end of the project.

What will be the key milestones?

The key milestone will be:

1. Inform. Open events specially organized will attract the interest of relevant stakeholders. Also, active participation in common events will help our voice to be heard.

2. Involve. Focus groups and workshops will give the chance to all the stakeholders to probe their strengths and initiatives. Design thinking methods will be use in order to achieve the most creative results

3. Recruit. A Gender Equality Plan will be co-created.

4. Disseminate. The Gender Equality Plan’s indicators will be promoted in order to be adopted in the monitoring of the RIS3 Strategy, and to have an impact on the agenda setting the next RIS3 Strategy.

What stakeholder profiles have a stake in this?
(remember to think about stakeholders in a broader sense)

The stakeholders involved in the Quadruple Helix are on the top of our interest list. They are in the front line of R&I and have already been approached and involved. We will also attempt to approach the rest of them, or additional ones, in the following time period.

1) Universities

Aristoteles University- esp. Informatics Department, Macedonian University - Department of Applied Informatics, International University),

2) Research Centres

(CERTH - Extroversion & Networking Services, Research Unit URENIO)

3) Industrial actors

i.e. Chambers of Industry and Commerce, Associations of industry, Hellenic Association of Women Entrepreneurs ICT Central Macedonia SEPVE, SEVE-Greek Exporters Association, FING-Federation of Industries of Northern Greece, KLEEMAN, OLYMPIA ELECTRONICS etc and

4) representatives of society(i.e NGOs working on gender issues)

SEGE – Association of Female entrepreneurs of Greece, ERGANI, Periktioni network

In addition, public officials from the Directorate of Innovation and Entrepreneurship will be involved and politicians working on innovation and policy development have also been approached. The One Stop Liaison Office of RCM, dealing with the entrepreneurial growth of the region, will also have a role in our actions.

The possible end –users and target groups will be included from the beginning of the co-creation process.

Who currently has an influence and who is outside of influence?

We are very much interested in engaging nonprofit groups, NGO's and Municipalities as well as other actors working on STEM (such as the Greek Chapter of the Association for Computer Machinery -W /ACM's Council on Women in Computing).

Greek Universities are required to have a Gender issues committee, but progress is limited at the moment. However, Aristotle University of Thessaloniki has a quite active one, with which we are planning to engage.

What challenges and barriers for achieving your impacts do you foresee?

As the term "RRI" is new and not so easy to define, we believe the procedure would demand to commit some time to discuss and define the meaning and characteristics of RRI.

Fundamental lack of understanding the need and importance of gender equality can lead to lack of engagement, minimizing the importance of the work and considering it a "woman's issue".

Operational obstacles are expected, especially when implementing the experiment as the involved actors differ on organizational or/and operational aspect.

Cognitive obstacles are considered as well, such as lack of motivation or interest, especially for those with power. Therefore, giving motivation to the different actors would be our main challenge throughout the procedure. The "out of the box" thinking should characterize the experiment actions.

Having the constant commitment of the stakeholders in a long procedure could be difficult and would require innovative approaches to maintain their interest.

Involving societal actors in the experiment will be a test for all the working team.

Obstacles to the set-up, management and monitoring of a Gender Equality Plan can be many and different. Resistance could be one the main obstacles. Institutional resistance may refer to a systematic lack of support for such plans, but individual resistance may, also, be occurred.

A lack of availability, or access to, sex-disaggregated human resources data is a challenge, as these figures are required to develop a baseline or initial assessment of where gender equality work and actions need to be targeted. Data protection policies and legislation may limit the availability of sex-disaggregated personal data. Storing any resultant data in a way that complies with European and national data protection requirements is also critical.

How do you plan to meet the challenges and barriers?

It is important to state that work on gender equality is usually not rapid: it may appear slow with concrete results and achievements not fully realized for many years.

With relation to the challenge referring to the operational obstacles and to the fact that the involved actors differ on organizational and operational aspects, the solution is most likely found on developing self-tailored GEPs based on the needs and structures of each involved organization (as mentioned in the previous answers).

RCM together with SEERC has taken a preliminary step on motivating and productively approaching of the R&I stakeholders of the region, by organizing an informational event on June, 13th 2019. A group of potential co-designers participated and learned about the project and its goals, along with the opportunities and benefits that RRI and gender equality can bring.

In addition, for further motivating the actors that do not belong to the 'gender field and discourse' and we wish for them to be involved in the implementation of the experiment, the main idea is to present to them RRI as a win-win situation (based on due to the added value of including responsibility /equality into their working plans). Our motivation plan consists of pointing how gender can contribute to the power of equality towards the, institutional growth, as well as to the general public picture and acknowledgement of each involved organization. For instance, the aspect of **expected change** for the benefit of the potentially involved actors will be highlighted, and it will be pinpointed to them that:

- A potential benefit from the participation in the experiment is the enrichment/formalisation and promotion of already existent activities related to the RRI key of gender equality.
- They can develop their internal mechanisms and make their structures more socially oriented and linked to contemporary concerns by promoting gender equality.
- Gender equality can lead to more transparent procedures within the institutions, which can in turn lead to their overall development.

- They can broaden the scope of the services they provide. For instance, organizations that provide entrepreneurial training can make their entrepreneurship programs more multi-layered and linked to societal concerns (e.g. training and mentoring to female future entrepreneurs, in other words a concept of entrepreneurship based on contemporary social values like the one of Gender Equality and Social Inclusion).
- They can expand their network by participating in the experiment, by coming in contact with actors/organizations with similar interests. Then, this signifies strengthening their existing collaborations or developing new ones.
- A higher status and prestige can emerge for the participating actors/organizations, since they will be able to indicate that the activities and actions they promote comply with the contemporary definition of social progress, a definition that stresses the need for social inclusions and no prejudice towards gender differences.
- In the case of educational institutions, that most of the times promote an equality statement or protocol, participation in the experiment can indicate that they remain committed to their vision and mission and they promote the highest caliber services to their students on a 'need-blind basis'. This in turn can enhance the educational institutions' international outlook, since they acquire the image of institutions heavily inspired by (and tangibly/substantially applying) social principles such as gender equality.
- In the case of technology and STEM-oriented institutions, participation in the experiment can seemingly enhance their outlook. They will be able to indicate that they are also oriented towards society's needs, and not only towards 'hard sciences' and strict innovation (a better 'status' in the regional ecosystem).

It is important to clearly reiterate that gender equality is not a minority, marginal issue but it concerns all who work in an organization. Gender equality may also need to be framed as key to development a successful, open and forward-thinking institution or organization, that respects and enables all who work or study in it.

The Gender Equality Plan should, as already mentioned, be tailored to the different actors so to win their commitment and devotion. All levels of stuff need to be involved by training or by allocating specific time for work on the Gender Equality Plans, so that the development of the GEP does not become a 'burden' for only a few individuals.

Traditional tools i.e. questionnaires, and more interactive ones i.e. design thinking will be employed during the planning and implementation procedure.

What exchanges and synergies with other territories might support you best during the co-design process?

Exchange of ideas/means for stakeholder engagements, or ideas for possible solutions to potentially emerging problems (during the co-design or the actual implementation of the experiment).

Itinerary of co-design

Activity type	3 preparatory **bilateral meetings** between regional organization and stakeholders
What will you specifically do?	Classification of meetings between same types of stakeholders (see the details in the rows below). The meetings will be conducted among stakeholders belonging to different category of the Quadruple Helix e.g. academia, industry etc. The theme of gender equality shall be discussed (followed by a 'problem statement'). The project and its experiemnt will once gain be explained and, potentially, clarified. Stakeholders with then have the chance to exchange ideas and start picturing (and broadly discussing) their participation in the experiment.
How will the respective co-design activities help define the case experiment?	The expectations from the meeting are a selection of suggestions and input with advice from different actors that will allow as to see a different or alternative point of view. In addition, different types of organizations may face similar challenges related to gender equality; exchange of feedback in this case can also lead to thinking at an initial stage more holistic measures to be embedded in the GEPs. Initial discussions can also take place with reference to the evaluation processes (as indicated in D6.1, territorial stakeholders should also state their opinions on the issue); e.g. what changes they expect to see through their experiments; what they consider as success criteria for the activities to be designed etc.
Who are the actors involved?	Possible regional stakeholders potentially involved: • **RCM (public body)** ***Governor to facilitate procedures** • AUTH (university) • UOM (university) • CERTH (research centre) • IHU (university) • ERGANI (organizations network supporting women) • URENIO (research centre) • OLYMPIA ELECTRONICS (industry) • KLEEMAN (industry)

	• **ACMW GREECE (council on women computing)** ***Possible Ambassador to promote** • SEGE (association of women) • Periktioni network (women researchers' network)
What is the timing?	M13-M18
Who is responsible?	RCM
Update June 2020	
Has the activity been completed as foreseen before COVID-19?	**Yes** (with subtle differences)
Do you plan to complete the activity by July 2020? If so, - what are the changes foreseen to complete the activity? - how is co-creation ensured?	**Yes.** The activity has already been completed during June 2020. 3 bilateral meetings took place, one per quadruple helix category (academia, industry, society together with policy makers). The meetings were entitled «Co-creation of a Gender Equality Plan in R&I in the region of Central Macedonia" The only difference is that these meetings were realized virtually through the Zoom platform (instead of physically, as originally planned). Co-creation was ensured by open, non-structured discussions among the participants of the meeting (who are major R&I players in the territory). Two brief presentations were delivered in the beginning of the meeting (about TeRRItoria in general, and gender equality in Europe in general). The presentations contributed to introducing the participants to the target theme, and to triggering them towards sharing their opinions. A lot of specific details about GEPs were **not** given in this primary meeting, exactly for ensuring genuine rather than guided co-creation. Each participant could also address relevant questions to the other participants. They

	also reported some experiences they had in relation to the target theme (challenges towards the gender dimension), thus encouraging all participants to co-think about potential solutions.
Do you plan to postpone the activity until after July 2020, and if so, do you have any indication of when the activity could be realized? - what are the changes foreseen to complete the activity? - how is co-creation ensured?	**No.**

Activity type	**Writeshop**
What will you specifically do?	Arrange a design thinking event collecting ideas in writing. These ideas shall refer to specific challenges to be addressed through the experiment. Reference shall also be made to the possible interventions ensuring gender equality within the organizations. These ideas will also be based to the information that will be retrieved from the representatives of the organizations (mentioned in the row below). In addition, according to the project's D6.1, it is possible that in this writeshop (as well as in the bilateral meetings) regional stakeholders can provide their input for developing evaluation mechanisms regarding the co-design and implementation phase of the experiments. Relevant discussions can take place, and some indicative questions can be posed to the stakeholders in the writeshop, for triggering them to reflect some potential mechanisms. Some indicative questions are: - What do you consider success criteria for each of the sub-tasks or steps of the experiment's implementation? - What kind of documentation do you think will be useful for monitoring the individual tasks/steps of the experiment? (e.g. survey responses from the participants of relevant events, small interviews with the involved stakeholders)

How will the respective co-design activities help define the case experiment?	This writeshop, which shall involve all relevant stakeholders, will contribute to a co-design process for proceeding to the first draft of the experiment. We will be able to draw results per organization and generate information per each organization's expertise. Some indicative information that can emerge regarding the different organizations is represented below. These are being grouped per quadruple helix category (naturally, future amendments and self-tailoring will be required regarding the kind of information that will be retrieved, even if these organizations belong to the same type). <u>Universities (AUTH, UOM, IHU) & Research Centres (CERTH, URENIO)</u> • Description of recruitment model at employee enrollment • Recruitment Committee • Recruitment of Researcher Staff in division to field of study/faculty – Grades A-D • Description of working conditions • Distribution of researchers by sex and mobility patterns • Remuneration of research staff • Work-life balance • Harassment and violence situations **(**Problem description & Problem data evidence in RPOs) Potential/indicative challenges to be addressed: In general women remain a minority among academic leaders, especially in the Science, Technology, Engineering, and Mathematics (STEM) fields. • Lack of long-term sustainability of Gender Equality Plan's actions • Lack of women leading research projects <u>Industry-Labour Market (OLYMPIA ELECTRONICS, KLEEMAN)</u> • Description of personnel in labour market • Distribution of R&D personnel my sex and type of contract • Distribution of researchers by sex, age group and staff position • Description of working conditions

	• Structure of working contracts (permanent/temporary/precarious=arrangement for less than 1 year) • Distribution of researchers by sex and mobility patterns • Remuneration of research staff • Work-life balance • Harassment and violence situations **(**Problem description &Problem data evidence in RPOs) Potential/indicative challenge to be addressed: Lack of Gender-Neutral Communication <u>Associations/Councils (SEGE, ERGANI, ACMW GREECE)</u> • Description of career model at each RPO • Career development at all RPOs • Distribution of scientific degree awarded by sex • Passage of time since the moment of opening doctor habilitated/PhD course by sex Potential/indicative challenge to be addressed: Scarcity of resources and coordination for committees on gender equality
Who are the actors involved?	Possible territorial milieu actors (as will be defined after bilateral meetings): • RCM (public body) • AUTH (university)(approx. 74.000 enrolled students) • UOM (university) (approx. 15.400 enrolled students) • CERTH (research centre) (approx.. 700 employees –most of them scientists/researchers) • IHU (university) (approx. 46.000 students) • ERGANI (organizations network supporting women) • URENIO (research centre) • OLYMPIA ELECTRONICS (industry) • KLEEMAN (industry) • ACMW GREECE (council on women computing) • *One possible Female Ambassador for better dissemination of information • SEGE (association of women) • Periktioni network (women researchers' network

What is the timing?	M13-M18
Who is responsible?	RCM
Update June 2020	
Has the activity been completed as foreseen before COVID-19?	**No.**
Do you plan to complete the activity by July 2020? If so, - what are the changes foreseen to complete the activity? - how is co-creation ensured?	**No.**
Do you plan to postpone the activity until after July 2020, and if so, do you have any indication of when the activity could be realized? - what are the changes foreseen to complete the activity? - how is co-creation ensured?	**Yes.** We are forced to postpone it to <u>September</u>, since we concluded that people are reluctant towards attending physical meetings. We will most likely maintain the content of the writeshop. The changes that will take place will depend on the COVID-related situation during this period of time (e.g. if it will be feasible to have a physical meeting in September, if not what alternatives exist etc.). Co-creation will be ensured with the same say as the above (presenting a basic frame of the GEP and asking for the participants; input regarding the future steps). A core but brief frame for the GEP will be presented to the attendees. We aim for this frame to be brief, so as the participants will provide their own ideas for potential measures to be integrated per each indicative area of intervention in the GEP (e.g. measures for work-life balance, female career progression etc.). In this way, the potential procedures entailed by the GEP will have been co-created and co-structured.

	Regarding the **citizen consultation**, another public engagement and co-creation method will be applied (e.g. focus groups).

Activity type	**Producing a Draft version of the transformative experiments**
What will you specifically do?	Produce some broad future directions, in the form of/resembling to a broad and preliminary gender equality template, which will afterwards be tailored to the specific needs of each involved actor. These will actually be the first steps towards the development of self-tailored Gender Equality Plans in the next phase of the project. Then, the future directions may, for instance, refer to the involved actors conducting an audit-like procedure, in order to evaluate the internal situation within their organisations ('assessment' of the extent to which gender equality is effectively institutionalised so far). The future directions may refer, for instance, to the involved actors going through four different phases: 1) Conducting a self and/or peer assessment in order to evaluate the internal situation within their organisations ('assessment' of the extent to which gender equality is effectively institutionalised so far) 2) Participating in co-creation processes for further defining and designing the objectives and actions of their gender equality plan 3) Setting up the scene for the implementation of the GEP 4) Setting up the scene for the monitoring and the evaluation of the GEP
How will the respective co-design activities help define the case experiment?	All the possible fields of intervention will be defined and initially, internal evaluated. (see question 2 for these possible fields of intervention)
Who are the actors involved?	RCM & SEERC
What is the timing?	M13-M18
Who is responsible?	RCM
Update June 2020	

Has the activity been completed as foreseen before COVID-19?	**No.**
Do you plan to complete the activity by July 2020? If so, - what are the changes foreseen to complete the activity? - how is co-creation ensured?	**No.**
Do you plan to postpone the activity until after July 2020, and if so, do you have any indication of when the activity could be realized? - what are the changes foreseen to complete the activity? - how is co-creation ensured?	**Yes.** The writeshop and the citizen consultation will be postponed to September, the draft version of the experiment will also be developed at that time. Input will seemingly be asked by core R&I players in the territory (already engaged by previous activities).

Activity type	**Citizen consultation**
What will you specifically do?	• Present and discuss the draft version of the transformative experiment, • Proceed to adjustments if necessary
How will the respective co-design activities help define the case experiment?	Achieve the final version and concrete steps towards Gender Equality. This co-creation process, which will actually be realized through the citizen consultation, will contribute to: 1. <u>Contribution to co-creation process</u>: a. Facilitation of participatory co-design of tailored GEPs b. Creation of "inclusive communities" formed by stakeholders that collaborate with each other c. At a later stage, the output of the citizen consultation can lead to the preparation of toolkits with examples of good practices and concrete initiatives for STEM institutions In addition, through this consultation we can define some prospective 'strategies' for enhancing the co-creation process in the implementation phase of the

	experiment as well (and not only in the design phase): 2. Means of co-creation process a. Consultation among RPOs b. Technical assistance to GEPs Teams – mutual learning attempts Finally, some indicative goals and corresponding actions in different areas that emerge after the consultation are: • Women Leadership in Science • Work-life balance • (early) career development • Genderisation of curricula • Gendering the content and
Who are the actors involved?	RCM & SEERC
What is the timing?	M13-M18 (**more specifically towards the end of July 2020)**
Who is responsible?	RCM
Update June 2020	
Has the activity been completed as foreseen before COVID-19?	**No.**
Do you plan to complete the activity by July 2020? If so, - what are the changes foreseen to complete the activity? - how is co-creation ensured?	**No.**
Do you plan to postpone the activity until after July 2020, and if so, do you have any indication of when the activity could be realized? - what are the changes foreseen to complete the activity? - how is co-creation ensured?	**Yes.** See the update above about the writeshop (citizen consultation and all related procedures to be merged with writeshop).

Concept Note – County of Trøndelag

The main ideas for your transformative Experiment

What's the overall purpose and motivation?
(describe the challenge that you seek to meet with this experiment)

In the original formulation we aimed at creating and fostering meaningful exchanges between centrally located universities and rural areas surrounding these universities. As result of our discussions at TeRRItoria's annual meeting in Bologna, which involved representatives from the university, from two rural areas and from the region's county council, we have specified the purpose of the experiment further: to address the problem of rural areas losing young and skilled inhabitants to cities (braindrain).

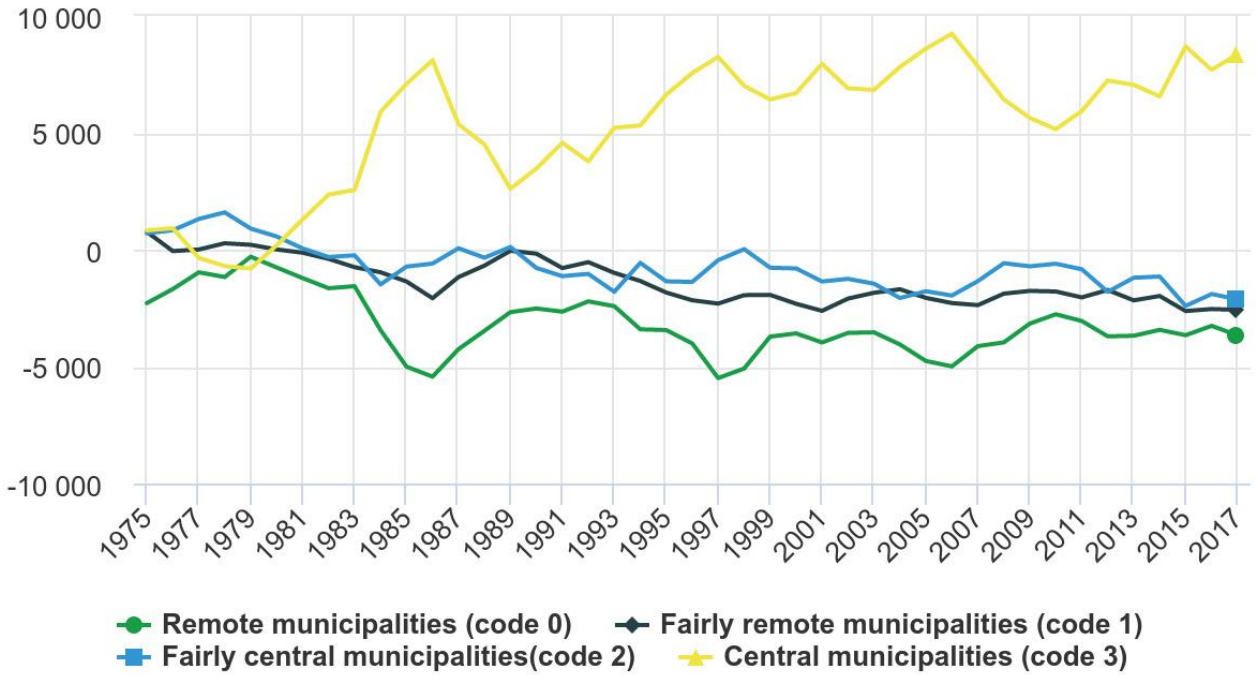

Starting point for this is that there is an explicit demand for skilled work force in the more rural areas involved. Moreover, there is the self-reinforcing effect of a more general social and economic decline when young people leave for the major cities. Universities' role in these processes is that they offer science based education to young people, which is relevant in two ways. First, they can be considered to be one of the 'pull'-factors, motivating young people to leave their homes. Second, universities produce a resource – young, skilled individuals – that is in high demand at rural areas. Rephrased within TeRRItorias conceptual frame, universities act as "deterritorializing" force when they pull away young individuals from more rural territories, weakening these territories in the process.

Based on this starting point, the still preliminary aim of the transformative experiment is creating and fostering meaningful exchanges between urban universities and rural regions **in the form of urban-rural migration of skilled individuals**. Again referring to TeRRItorias concepts, the question addressed is how "reterritorialization", i.e. strengthening rural territories by providing skilled population inputs, would look like and how it can be achieved.

Four factors have to be included if we focus on skilled urban-rural migration.

First, the dualism between urban and rural has been discussed critically from a variety of angles. People and resources flow regularly between locations that have various degrees of rurality and urbanity respectively. Moreover, "deterritorialization" effects, for example increased access to the same kind of information and entertainment enabled by broadband internet, have for decades decreased differences between the rural and the urban. In addition, within the regions involved in the experiment, even though they are less central than the major university city of Trondheim, more urban and very rural areas exist. The experiment in skilled urban-rural migration is situated in a context in which a) what qualifies as urban and as rural is a matter of relation between more central and more marginal locations and b) in which urban and rural elements are increasingly mixed and entangled.

Figure 1. Internal migration. Net migration. Centrality

Source: Migrations, Statistics Norway.

Second, while centrally located municipalities clearly profit from domestic (and international) migration (as depicted in figure 1), the role of education-related migration is less clear. A demand for life-long learning, labour market flexibility and increased overall mobility together point into the direction that the simple image of students chosing one job at one location, be it more urban or rural, and then staying there for the rest of their life may be too simple. For the experiment this means that the goal would be to strengthen rural territories to at least become one node in a longer chain of education- and job-related migrations.

Third, a one-time movement of skills and qualifications is not an end in itself. To increase innovative capabilities in the region, specific skills, in which an individual is trained, have to be complemented with networks through which updated knowledge and other resources can flow into and out of the region. In the context of the experiment, this means that the networks of the moving persons are as relevant as the skills they possess. Referring back to the original formulation of the problem addressed in the Trøndelag region, networks between research, teaching and students are particularly pertinent to this question. Are students equipped with the social relations, tools and knowledge to connect university research with their new work environment?

Fourth, and connected to this, prior to the move, teaching and its relation to research can take many forms of which only few are able to realize the regional innovation potential of moving, highly skilled individuals. Only if the moving individuals are skilled both in terms of basic research skills and in terms of being familiar with the state of the art in the field, we can expect that they can act as bridge between research millieus and regional innovation. The question that has to be addressed here is which forms of teaching are most effective to enable students to not only apply their skills in work life but to become a driver of innovation.

Do you already have possible strategies or concrete actions in mind for the transformative experiment?

From the NTNU side of things, the first option is to plan and implement a pilot within NTNU's master education (and corresponding educational offers) in which measures are implemented which are able to support the goal of making less centrally located regions a viable choice for the first job. In line with the four complicating factors described above, this would have to include experimentation with research based teaching and the establishment of networks that reach beyond the end of the education.

The county council has a mediating role, both between policy documents aiming at strengthening regional development through innovation and local stakeholders, and between the various groups involved. In line with this role, in the experiment it will mostly act as facilitator. In addition to this, a specific gap identified by the county council is the lack of support for research based start-ups in the regions. At and around universities, it is easy for students to find like-minded collaborators and get support for experimenting with new ideas. These arenas for innovation are completely missing in the regions.

Business gardens, the third type of partner in the Trøndelag experiment, have already implemented effective measures to attract skilled work force and to encourage innovation. Among these, trainee programs, start-up courses and skills fora have been identified as most relevant. The experiment should either aim at developing these measures further or to fill gaps left by them.

What is the specific focus of your experiment?

Graduates produced at NTNU, what does it take to get them to move to Røros, Namdalen and to enable them to be drivers of innovation in these regions?

What aspects of RRI do you want to incorporate in your case experiments?

In terms of RRI, an obvious aspect which has to be incorporated in the experiments is the question of how science-based education can be made "response-able" for demands for innovation in more rural areas. This concerns the specific subjects and skills taught, but it also touches upon the more fundamental question of how a reterritorializing scientific education might look like.

What do you expect to achieve in your territorial experiment?

- Learning about migratory choices of the young and highly skilled

- Learning about science-based teaching of innovative capacities

- Concrete methods that support local regional actors in their efforts to encourage the reterritorialization of graduate students

What will be the key milestones?
- Design of the experiment concluded (End of January)
- Implementation of one pilot in each participating territory (before the summer)
- Feedback from stakeholders about the process (after the summer)
- Implementation of additional measures (after the summer)

What stakeholder profiles have a stake in this?
(remember to think about stakeholders in a broader sense)
At NTNU:
- Technology Transfer Office, NTNU Bridge, Start NTNU, NTNU Karriere
- Heads of teaching at faculty and department levels
- University media
- Student council
- Students and graduate students
- Guidance counselors and advisors

In the regions:
- Business gardens
- County council
- Local businesses
- Municipality
- Higher secondary education institutions
- trainees and previous trainees
- Local and regional media
- Local civil societies
- Community groups
- Volunteer centres

Who currently has an influence and who is outside of influence?
- To be assessed during the preparations for the experiment

What challenges and barriers for achieving your impacts do you foresee?

- The definition of the experiment and of its aim is still too broad encompassing all kinds of science-based education and all kinds of local businesses. A challenge will be to identify specific student groups and receiving businesses that allow a certain degree of generalisation.

Engaging with all the stakeholder groups relevant for the co-design process.

Anchoring the actions and methods resulting from the project would be supported by presenting them in the local and regional media. Achieving communication of results may require a network not already existing within the project team.

Making the transition from doing a study where we collect relevant information to build and complete an experiment, to establishing the use of within governing bodies, concrete actions relevant for the County's policy making and for regional developments.

How do you plan to meet the challenges and barriers?

In line with the project plan of TeRRItoria we will focus on these challenges in the co-design of the experiment.

Active use of networks supplied by the TeRRItoria project team.

Active use of feedback from stakeholders and regular communication about project results.

What exchanges and synergies with other territories might support you best during the co-design process? The basic problem addressed (braindrain) is relevant for all territories participating in TeRRItoria.

Itinerary of co-design

Activity type	Skype interviews with each business garden
What will you specifically do?	Semi-structured interview
How will the respective co-design activities help define the case experiment?	Clarify needs from local stakeholders
Who are the actors involved?	Business garden representatives
What is the timing?	Week 2
Who is responsible?	NTNU
Update June 2020	
Has the activity been completed as foreseen before COVID-19?	yes
Do you plan to complete the activity by July 2020? If so, - what are the changes foreseen to complete the activity? - how is co-creation ensured?	no
Do you plan to postpone the activity until after July 2020, and if so, do you have any indication of when the activity could be realized? - what are the changes foreseen to complete the activity? - how is co-creation ensured?	no

Activity type	Site visit and interviews at Røros and Namsos
What will you specifically do?	Semi-structured interviews, go-along ethnography

How will the respective co-design activities help define the case experiment?	Investigate context in which local stakeholders act
Who are the actors involved?	Business garden representatives, local stakeholders
What is the timing?	Week 5 - 8
Who is responsible?	County Council, business gardens
Update June 2020	
Has the activity been completed as foreseen before COVID-19?	No
Do you plan to complete the activity by July 2020? If so, - what are the changes foreseen to complete the activity? - how is co-creation ensured?	Yes, the activity was postponed and completed 29.05.2020
Do you plan to postpone the activity until after July 2020, and if so, do you have any indication of when the activity could be realized? - what are the changes foreseen to complete the activity? - how is co-creation ensured?	No

Activity type	Document analysis
What will you specifically do?	Analyze the existing documents that present previous work with the "brain-drain" and highlight the most important actions and experiences that are useful in the work towards the Trøndelag experiment.
How will the respective co-design activities help define the case experiment?	Avoid making the same mistakes or repeating actions already tested.
Who are the actors involved?	NTNU, County Council
What is the timing?	Week 7
Who is responsible?	County Council
Update June 2020	
Has the activity been completed as foreseen before COVID-19?	Yes
Do you plan to complete the activity by July 2020? If so,	N/A

- what are the changes foreseen to complete the activity? - how is co-creation ensured?	
Do you plan to postpone the activity until after July 2020, and if so, do you have any indication of when the activity could be realized? - what are the changes foreseen to complete the activity? - how is co-creation ensured?	N/A

Activity type	Student workshop
What will you specifically do?	Engage students with the challenges associated with reterritorialization. 3 stage workshop process – brainstorm, idea selection, proposal
How will the respective co-design activities help define the case experiment?	Investigate student understandings what it takes to get graduate students to relocate to rural areas.
Who are the actors involved?	Students, graduate students, advisors, NTNU, County council
What is the timing?	Week 10
Who is responsible?	NTNU
Update June 2020	
Has the activity been completed as foreseen before COVID-19?	No
Do you plan to complete the activity by July 2020? If so, - what are the changes foreseen to complete the activity? - how is co-creation ensured?	Yes, the workshop has been transformed in a series of 7 online interviews with students, this was necessary because most of the students have left the city after all lectures were moved online. The interviews have yielded the contribution to the co-design that was originally intended
Do you plan to postpone the activity until after July 2020, and if so, do you have any indication of when the activity could be realized? - what are the changes foreseen to complete the activity? - how is co-creation ensured?	no

Activity type	Stakeholder workshop
What will you specifically do?	Map knowledge within a broad stakeholder group. Discuss knowledge and experiences extracted from the previous actions. Propose actions that can be included in final experiment.
How will the respective co-design activities help define the case experiment?	Clarify the needs of local and regional stakeholders. Gather feedback about a draft proposal for the experiment.
Who are the actors involved?	Business gardens, County council, local businesses, municipalities, trainees and previous trainees, local and regional media, local civil societies, community groups, volunteer centres, NTNU
What is the timing?	Week 11
Who is responsible?	NTNU, County Council
Update June 2020	
Has the activity been completed as foreseen before COVID-19?	No
Do you plan to complete the activity by July 2020? If so, - what are the changes foreseen to complete the activity? - how is co-creation ensured?	Yes, the workshop is scheduled for the end of June
Do you plan to postpone the activity until after July 2020, and if so, do you have any indication of when the activity could be realized? - what are the changes foreseen to complete the activity? - how is co-creation ensured?	No

Activity type	Write-shop in Trondheim
What will you specifically do?	One-day collaborative writing
How will the respective co-design activities help define the case experiment?	Produce final draft for the experiment
Who are the actors involved?	NTNU stakeholders, County Council representatives, Business garden representatives
What is the timing?	Week 15
Who is responsible?	NTNU

Update June 2020	
Has the activity been completed as foreseen before COVID-19?	No
Do you plan to complete the activity by July 2020? If so, - what are the changes foreseen to complete the activity? - how is co-creation ensured?	Yes. Due to the compressed time schedule the writeshop will be organized online through collaborative editing of a common file. The stakeholders will be encouraged to actively contribute with their edits to secure co-creation.
Do you plan to postpone the activity until after July 2020, and if so, do you have any indication of when the activity could be realized? - what are the changes foreseen to complete the activity? - how is co-creation ensured?	No

Activity type	Final workshop
What will you specifically do?	Half-day workshop presenting and discussing the experiment
How will the respective co-design activities help define the case experiment?	Getting feedback and refining the design
Who are the actors involved?	All stakeholders, general (regional) public
What is the timing?	Week 20
Who is responsible?	NTNU
Update June 2020	
Has the activity been completed as foreseen before COVID-19?	No
Do you plan to complete the activity by July 2020? If so, - what are the changes foreseen to complete the activity? - how is co-creation ensured?	No

Do you plan to postpone the activity until after July 2020, and if so, do you have any indication of when the activity could be realized? - what are the changes foreseen to complete the activity? - how is co-creation ensured?	Yes, the activity is scheduled right after the summer break (Mid August). This has the advantage that it can act as kick-off event for the transformative experiment which is to commence then. Given the traditional "lock-down" of all of Norway during the summer break, we do not foresee relevant activities to happen during this period, which means that a date right before or right after the summer break is mostly equivalent. However, we will have to make sure to manage the temporal proximity between workshop and the first experimental activities, so that co-creation can take place. We will include this concern into the planning for the experiment which takes place during the stakeholder workshop and the co-writing phase.

Concept Note – Municipality of Gabrovo

The main ideas for your transformative Experiment

What's the overall purpose and motivation?
(describe the challenge that you seek to meet with this experiment)

The overall purpose and motivation

With the realization of the transformative experiment the RRI notion will be introduced in the territory among the local stakeholders. The will lead to the development and positive change in the institutions represented in the experiment, making them inclusive and responsive to the territorial needs. Regarding the potential participants in the co-working process their own views will not only be shared but developed and challenged, their knowledge deepened, new capacities developed, the relationships between them improved. In result R&I/science will be brought closer to people, will become responsive to societal needs and reflect traditional/existing territorial reality.

The challenge

The transformative experiment will focus upon Public Engagement Plan for S3 development.
Gabrovo Municipality's experiment will be aimed at intervening on the RRI key Public engagement, as defined in the project. The second key challenge that is to be addressed is Science education.
The challenge that is to be met with the experiment is directly related to the two RRI keys and refers to achieving collaboration and interaction at territorial level among the main stakeholders. Generally considered the need is to establish and deepen the relations and to bring about the notion and awareness about the RRI concept and to build up motivation for co-working and contributing and also sharing innovation capacity, solutions, achievements.
Public engagement is a necessary component of the territorial development. Although a number of successful initiatives, events and practices of innovative character are realized they need to be built upon, focused and deepened.

Do you already have possible strategies or concrete actions in mind for the transformative experiment?

STRATEGY

To build upon the existing good practices, accumulated by Gabrovo Municipality in organizing and conducting events/initiatives and implementing practices to incite actions in specific stakeholders' groups and to offer options for new community development paths that to be considered, discussed and consequently publicly accepted and followed.

CONCRETE ACTIONS

General Introductory Meeting (GIM)

The transformative experiment need to gather the relevant stakeholders that have role in R&I development and responsibility in the territorial development.
Actions:

- GIM will have the purpose to introduce the project to the local community, its goals and expected results;

- The concept of RRI will be brought to the participants by experienced expert(s), so that it could properly realize and promoted;-
- The planned territorial experiment, the participatory process that is to happen in the development of the Public Engagement Plan for S3 development will be related to the public to provoke interest generate willingness to participate.

Three bilateral meetings will be organized with groups of participants, gathered around three topics, related to upon Public Engagement Plan for S3 development.

Actions:

- With the assistance of a professional facilitator/moderator a discussion will be conducted to obtain information about the participants' values and understandings, preferences and ideas for development of the territory in the specific domain;
- informal interaction/exchange, expression of personal opinion, questioning, ect.;
- using model template to generalize the collective findings of each group.

Writeshop

Actions:

- The activity will involve deliberation and expression of shared opinion of the bilateral meetings' participants, assisted by the summarized findings, template based.
- External opinions will be gather as well – directly at the writeshop and later through the 'post box'
- A draft document based on the main conclusions/ideas of the participants regarding public involvement in the future development of the spheres will be issued.

Summit

Actions:

- The summit will be organized with participation of 50-70 people. The number of people will be considerably larger than the bilateral meetings, as more people/interested parties/groups/citizens.
- They will be formally presented with the findings of the participants in the previously realized activities;
- A possibility for discussion will be created discussion on the topic of territorial RRI and the public engagement.

The process will be technologically provided to ensure efficient communication and thematic discussion. Larger number of participants will provide for more meaningful dialogue, based on the different viewpoints. The event will be informative for the participants, will promote territorial RRI and Public Engagement Plan for S3 development and will be also community consolidating and inspiring for the participants.

What is the specific focus of your experiment?

The specific focus of the Gabrovo Municipality experiment is upon Public Engagement Plan for S3 development.

In particular, it will focus upon three main areas of the community development, which could interrelated and complement each other in various aspects.

What aspects of RRI do you want to incorporate in your case experiments?

The main aspect that will be incorporated in the case experiment will be regarding Public Engagement in the territorial RRI and related with it will be the development of the Science Education and how the innovation/science to receive common understanding and to be responsive to community needs.

What do you expect to achieve in your territorial experiment?

Through the territorial experiment one main intervention is aimed, namely to widen the Public Engagement in the territorial planning and respectively development. This general goal is to be achieved in three main thematic areas that are related, science education being one of them.

What will be the key milestones?

The key milestones will be the main activities and the related actions for their implementation, namely:

- Defining the exact dates of each of the 6 activities;
- Selecting the experts/moderators/facilitators;
- Choosing the ways to approach the possible community actors that could be involved in the activities;
- Defining the groups of participants, especially in the bilateral meetings;
- Gathering the 'post box' ideas and summarizing them;
- Generalizing the received ideas/opinions/group summaries into one document;
- Presentation of the generalized ideas to the interested parties and the community;
- Promotion/dissemination provision.
-

What stakeholder profiles have a stake in this?
(remember to think about stakeholders in a broader sense)

The traditionally considered participants within the narrow specialists' circle and the local policy makers will be naturally included. Efforts will be put in involving stakeholders who are interested and have potential to contribute to the process of co-designing, even such who demonstrate dissatisfaction with the initiative and its usefulness and applicability but who have competences in the thematic areas of discussion.

Who currently has an influence and who is outside of influence?

Currently there are traditionally active participants in the initiatives and events related to territorial strategic planning/high-level political EU events, including those for R&I. More local involvement is necessary to be achieved, on part of the businesses of all kinds and scope, educational institutions at all levels, researches and innovators in various domains, civil society organizations/representatives.

What challenges and barriers for achieving your impacts do you foresee?

The main challenge for achieving the planned activities will be reluctance of the community actors to participate in activities of such format, usually considering too abstract and sometimes political.

How do you plan to meet the challenges and barriers?

This will be overcome with providing information and specially addressing people/groups that could be interested and explaining that the activity enables participants to have voice, influence and be part in the territorial planning process.

What exchanges and synergies with other territories might support you best during the co-design process?

Other territories could be beneficial to our co-design process through an exchange, based on sharing solutions and approaches of addressing specific keys of intervention. The different perspective and approach could be of interest as a provocation and inspiration. Of special interest are the partners' approaches of achieving public participation and immediate involvement in the process of territorial development planning in its different aspects.

Itinerary of co-design

1.

Activity type	General Introductory Meeting
What will you specifically do?	Introduce the territoria RRI concept to the stakeholders, interested parties, local actors, etc.
How will the respective co-design activities help define the case experiment?	The activity will have the important role to provide the general conceptual frame to the participants, to introduce the RRI and to provoke interest, involvement and activity. This activity will completely relate to the general planning that takes place in Gabrovo municipality regarding the forthcoming programing period and the future regional, territorial development. Thus through the realization of the overall experiment not only

	Public Engagement Plan (PEP) of S3 development for the territory will be developed but the most of all it will allow the local governance to assure citizens' involvement , inclusion and participation in the policy-making process of the strategic territorial development planning. - The activity was realized as planned in the initial Concept note with considerable interest, involvement and enthusiasm on part of all the participants. Many ideas were conceived, shared and discussed - one of them was to refocus the first bilateral meeting from educators (many of them present at the meeting) to the students and young people.
Who are the actors involved?	The actors will be all the potential participants in the bilateral meetings and other interested parties – citizens, citizens' groups (formal and informal)
What is the timing?	<u>February - March 2020</u> The activity will be organized as a pre-set meeting with involvement of experts who will present the RRI idea The activity was realized on the 28th of February 2020
Who is responsible?	Responsible for the organization will be Gabrovo Municipality and ARC- fund

2.

Activity type	Bilateral meeting 1 - Educative perspectives After the COVID19 crises and the situation in Bulgaria with the restrictive measures we decided to do on-line survey.
What will you specifically do?	This meeting will involve all the regional stakeholders who could provide public contribution to the S3 development process at regional level in the educational domain. After the realization of the General Introductory Meeting, the potential participants will have an idea what is planned to be realized at the bilateral meetings, writeshop and summit within this project activity. Those, interested to participate could declare interest at the General Introductory Meeting. Information about the specific bilateral meeting with exact

	place, timing will be provided in formal way to all the potential participants both participated or not at the General Introductory Meeting. The bilateral workshop will be moderated by an expert, experienced in groups work moderation, who will apply non-conventional approaches to activate and provoke the participants to define main educative issues at the territory, the possible approaches of addressing them, innovative solutions that could be applied at the existing situations. With the assistance of the partner ARC- fund, a model template will be developed that will help the groups of participants to define the strategic priorities for the educative development within S3. The group could debate on wider scope regarding the educative affiliations with other societal issues/domains and desired ways of public involvement and engagement. A survey was prepared with the assistance and involvement of the Institute of market economy (Nationally recognized organization) it was published and promoted in various ways – municipal site, formal contacts to the educational institutions and regional representative of the Ministry of education, and informal – social networks, personal contacts. 645 students and young people participated in Gabrovo Municipality on-line survey. The survey results were analysed, discussed and evaluated as an useful resource for future regional planning. A formal analysis was made and published. It is translated and given to EURADA.
How will the respective co-design activities help define the case experiment?	The activity is an important experimental element as it will demonstrate the participants understanding on the question and provide grounds for future territorial development in the educational domain.
Who are the actors involved?	Representatives from Technical university – Gabrovo; representatives from the secondary schools in Gabrovo, with focus upon VET providers, representatives from the Regional Management of Education, specialized in VET

	(regional structure of BG Ministry of education); representatives of NGOs, providing education and training; municipal experts in education.
What is the timing?	March - April 2020
Who is responsible?	Gabrovo Municipality

3.

Activity type	Bilateral meeting 2 - Business perspectives After the COVID19 crises and the situation in Bulgaria with the restrictive measures we decided to do on-line survey.
What will you specifically do?	This meeting will involve the regional business representatives, focused upon SMSs. Stakeholders who could provide public contribution to the S3 development process at regional level in business aspect. After the realization of the General Introductory Meeting, the potential participants will have an idea what is planned to be realized at the bilateral meetings, writeshop and summit within this project activity. Those, interested to participate could declare interest at the General Introductory Meeting. Information about this bilateral meeting specifying time and place will be provided formally to potential participants - both participated/not at the General Introductory Meeting. The bilateral workshop will be moderated by an expert, experienced in groups work moderation, who will apply non-conventional approaches to activate and provoke the participants to define main business development issues of the territory, the existing imminent needs of the business community and their relation to the main aspects of the territorial development, new/innovative suggestions that could possibly be applied regarding the defined development obstacles. With the assistance of the partner ARC- fund, a model template will be developed that will help the groups of participants to define the strategic priorities for the business development within S3. The group could debate (depending of the individual idiosyncrasies of the involved participants) on other related issues reading the

	business impact upon and pertinence to other societal spheres. The survey is still a process of implementation still. It is also an on-online survey. The local business is addressed with the means and contacts of the Information district point, Gabrovo municipality and Regional Innovation center. The survey is a thorough one and the business in the current situation of crisis is hasn't been in its usual active state. So, the survey was prolonged and personal contacts were used to activate the business community and get its responses and vision.
How will the respective co-design activities help define the case experiment?	The activity is an important experimental element as it will demonstrate the participants understanding on the question and provide grounds for future territorial development in the business domain.
Who are the actors involved?	SMS Representatives (traditional business); start-ups; sole traders; Chamber of commerce
What is the timing?	May- June 2020
Who is responsible?	Gabrovo Municipality,

1.

Activity type	Bilateral meeting 3 - Innovative perspectives
What will you specifically do?	This meeting will involve regional representatives with innovative potential. The group will have a miscellaneous profile, regarding representation, as it will focus upon involvement of people with innovative disposition and/or such with authority to intervene upon the existing state of the art and promote/support innovation. Some of the participants will be recruited after the General Introductory Meeting others will be invited to participate on purpose. The bilateral workshop will be moderated by an expert, experienced in groups work moderation as the other two workshops. The groups could define its own priorities that are territory relevant, innovative and need to be integrated through public involvement in the S3. **The third bilateral meeting** with regional representatives with innovative potential, which was planned to involve mainly politicians and decision makers, started with personal

	meetings, interviews, discussions, conducted by a professional expert in the domain (representative of the Institute of market economy) and ended with a meeting. This was organized immediately after the restrictive measures were loosened and gathering of people were allowed – on the 2nd of June. The representatives were mainly mayors of villages of Gabrovo municipality, as this is a main issue for the territory and for achieving of an active public engagement. The main advantages and hindrances were shared that could/could not help to turn the territory – city and its adjacent areas into a Smart territory. A possibility to share practices and approaches with the Norwegian partners, whose main issue were the rural areas and their revitalization could be extremely helpful.
How will the respective co-design activities help define the case experiment?	The activity is an important experimental element as it will demonstrate the participants understanding on the innovation and its role for the territorial development.
Who are the actors involved?	societal groups of scientific researchers, ICT sector, Youth Community Groups, City Council, creative industries; local governance; politicians
What is the timing?	– June 2020 (meeting – 2nd of June)
Who is responsible?	Gabrovo Municipality,

5.

Activity type	Writeshop After the COVID19 crises and the situation in Bulgaria evidently gathering all the relevant stakeholders together was impossible. Compensatory activities were realized
What will you specifically do?	After conducting the three bilateral meetings the participants will be gathered together to share the summarized findings of the groups in the respective domains. To take part to the writeshop will be given chance to a wider representation of people who haven't participated in the bilateral meetings. At the writeshop the findings/conclusions of each of the bilateral meeting will be presented by a

	group's speaker. The participants will have the possibility to comments, suggest, and contribute of the other groups' findings. They will debate and complement each other in the design of the public engagement planning. Thus, an open, transparent process will be conducted, involving the three bilateral meetings' participants that could generate a wider discussion. In that way, through co-working and deliberating the outline of the possible elements of the PEP could be depicted. After this public part of the writeshop the participants and the citizens will be given the opportunity to offer additional ideas in pre-set time limits into a specially defined 'post box'. This will be a virtual and actual point, organized with the assistance of the Regional Information Point – Gabrovo, a unit responsible for promotion, popularization and information about the EU policies in the Gabrovo district. Writing was done using the on-line survey method. In the on-line surveys open questions are included, where each respondent can express his/her own ideas, suggestions. These surveys turned out to be very useful instrument for searching and defining the community's responses to policies and expectations. Interesting ideas could be gather in the open questions. Another instrument were the personal meetings realized within the third bilateral meeting with regional representatives with diverse profile whbo are responsible for the leading sectors in the community.
How will the respective co-design activities help define the case experiment?	This activity will be invaluable with the contributed ideas, external perspective and situation analyses of the societal actors involved. Thus, the PEP will represent the shared understanding of diverse community representatives and express the local thinking/desires for the territorial RRI.
Who are the actors involved?	Bilateral meetings' participants; participants in the General Introductory Meeting; other representatives/members of the institutions/organizations/formations represented at the meetings; media; citizens
What is the timing?	March- Junel 2020

Who is responsible?	Gabrovo Municipality

6.

Activity type	Summit
What will you specifically do?	The summit will gather all the participants in the research process with the aim to present a common generalized version of the findings of the bilateral meetings, writeshop and received citizens' additional ideas. The participants will have the possibility to comments, discuss, object or express other new ideas. Thus the Public engagement Plan will be defined and given a wide involvement and recognition, also acceptance and motivation for realization. The RRI ideas will receive visibility and texture and will be easily promoted and popularized. The summit will be organized on the 23rd of June and representatives of all the stakeholders' groups will be included
How will the respective co-design activities help define the case experiment?	With this activity mutual understanding and collaboration between experts, policy makers, researchers, stakeholders and citizens will be achieved. Thus the citizens' engagement in research and policy planning and development will be achieved and the future public participation set and defined in the Public engagement plan for S3 development.
Who are the actors involved?	Bilateral meetings' participants; participants in the General Introductory Meeting; other representatives/members of the institutions/organizations/formations represented at the meetings; media; citizens; policy makers
What is the timing?	The summit will be organized on the 23rd of June
Who is responsible?	Gabrovo Municipality

Appendix 3: Template for Concept Note

Introduction

With the beginning of WP4, the Territoria project is moving from the reflexive strand towards the proactive stand. As the project moves towards the co-design process, the concept note serves as a reflection and as a practical guideline, for the co-design of transformative experiments that will be developed in each territory. The concept note can hence be viewed as the **first step of the co-design process**:

Concept note → Co-design → Transformative Experiment

WP2 and WP3, and the workshop in Bologna 27-28 November 2019, have all brought on important reflections to consider in the formulation of the concept note, which should be developed, to:

a. Present the main ideas which the transformative experiments are focused on
b. Describe the itinerary of co-design to be carried out, including list of actors to be consulted

Based on the concept notes, each territory will, in a co-design process, activate in parallel a process of consultation of regional and territorial stakeholders and citizens, for a better definition of the experiments.

The reflections on the **main ideas for the transformative experiment** in the concept note should help adapt the focus of the experiment – considering that time has passed, in which period things may have changed in the territorial context, as well as learning has developed in the project since the beginning. We therefore strive to have the concept note to illustrate the background and focus for the experiment. In addition, while going through these reflections in the concept note, the scope becomes clearer and hence a more straightforward task to start the co-design process. With a clear focus on the scope of the experiment, communicating with stakeholders on their potential involvement in the experiment and in the co-design, might also prove easier.

In addition to the main ideas of the transformative experiment, the concept note should also describe the **itinerary of the co-design process**, outlining the practical steps needed for the activities in the co-design process.

Stakeholders in the co-design process are **societal actors** and activating the different knowledge that they may have, for example considering actors that might have a more indirect influence on the process. Stakeholders should be thought of as **stakeholders in a broader sense**, not limited to key stakeholders, such as universities, industry, public institutions, but should also be thought of as smaller or other societal actors, for example civil society organizations, local businesses, and citizens. By including societal actors early in the process, for a greater chance of them having ownership in the process. The idea is to open up the co-design process and to have a two-way exchange with actors for insight into the needs and wishes they might have for the design of the experiment.

The **timeline for the concept note** is as follows:

- **5th of January:** Territorial Partners send draft concept notes to DBT
- **Mid-January:** DBT provides feedback sessions on concept notes to the experiments Partners (in writing and by virtual meeting)
- **Mid-End January:** Territorial Partners adjust and finalize concept notes
- **End of January:** Final concept notes for all experiments

The main ideas for your transformative experiment

In this part of the concept note, the background and scope of your experiment should be described. Please use the guiding questions below for the description (5-7 pages).

What is the overall purpose and motivation? (describe the challenge that you seek to meet with this experiment)

Do you already have possible strategies or concrete actions in mind for the transformative experiment?

What is the specific focus of your experiment?

What aspects of RRI do you want to incorporate in your case experiments?

What do you expect to achieve in your territorial experiment? What will be the key milestones?

What stakeholder profiles have a stake in this? (remember to think about stakeholders in a broader sense) Who currently has an influence and who is outside of influence?

What challenges and barriers for achieving your impacts do you foresee? How do you plan to meet the challenges and barriers?

What exchanges and synergies with other territories might support you best during the co-design process?

Itinerary of co-design

This section of the concept note serves as a practical reflection of the questions posed above, and should provide an itinerary over the co-design process, by stating a timing for each activity.

In this part of the concept note, you should reflect on what kind of knowledge should be activated in the co-design process, and how this knowledge helps define the scope and the planning of the transformative experiments.

During the co-design process, each territory should conduct the following 6 activities.

Please note that the activities can be conducted in the order best suited for the given territory and the order of which the activities are conducted, should be a point of reflection.

- At least 3 preparatory bilateral meetings btw regional organization and stakeholders
- One writeshop involving all the main territorial milieu actors to be organized and carried out
- Based on the writeshop results produce a draft version of the transformative experiments
- Organize a citizen's consultation for a large public (50-70 people) to present and discuss the draft version of the transformative experiment

For each of the activities, please copy and fill the below template, using the number of characters needed:

Activity type	
What will you specifically do?	
How will the respective co-design activities help define the case experiment?	
Who are the actors involved?	
What is the timing?	
Who is responsible?	

Appendix 4: Template for Final Plan of Transformative Experiment

Introduction

We are hereby sharing the document 'Design and Plan for the Transformative Experiment', to be handed in by territories to DBT.

Based on the co-creation process in WP4, the document should describe the design and the plan for implementation of the transformative experiments (TE's) in WP5. The document thereby serves as a follow-up to the concept note, which described the co-design process of the TE, including initial ideas for the TE, and the specific timing of activities carried out from month M12 in the project.

After the formulation of the concept note, each territory carried out a co-design process with regional and territorial stakeholders, for the design and planning of the experiments. The purpose of the co-design process was, and continuous to be, to design the 5 transformative experiments through a co-creation process, involving all principal actors active in the territorial milieu.

The process during WP4 is as follows:

Concept Note → Co-design process → Design and Plan of TE's to be implemented in WP5

The activities planned in the co-design process were mostly foreseen as face-to-face interactions for co-creation. Due to COVID-19, which has impacted all territories differently, not all activities were able to be implemented in full in the original format as planned in the concept note, as they were moved to an online format and/or delayed, which has challenged the opportunity for co-creation in the originally intended form.
Depending on the development of COVID-19 in each territory, some activities may still be implemented as originally foreseen in the concept note, however a little delayed.

The reflections made in this document, should describe the focus of the transformative experiment to be implemented in WP5, the main design, key stakeholders, and the specific plan for implementation. The design and plan of the transformative experiment should draw on the experiences made in the co-design phase and the content should be based and developed as part of the co-design process.

The design and plan of the transformative experiment will form part of the deliverable D4.2., together with the concept notes formulated in M12.

The design and plan of your transformative experiment

In this part of the document, the design of your transformative experiment should be described. The questions below should help you outline the transformative experiments so that you have a clear plan for the implementation, and external actors can understand the purpose and focus of the activities.

Please fill the guiding questions below:

1. What is the specific focus of your transformative experiment?

2. Please describe the challenge(s) that you seek to meet with the transformative experiment.

3. Do you have additional visions for the transformative experiment?

4. Which stakeholders have participated in developing the plan and how have they been involved?

5. What concrete actions are planned for the transformative experiment?
   Please describe them in the table below, think of the table as a step-by-step implementation plan.

Activity *What is the specific activity? Please describe what you plan to do*	**Actors** *Which stakeholders will you involve and who is responsible for the activity?*	**Timeline** *When is the deadline?*	**Impact** *What do you wish to achieve with the activity?*	**Success criteria** *What are the measurable success criteria for your activity? Think about how you can assess whether your goals are achieved*
Example: *Innovation course in master program at X university: we wish to create a course for students to learn entrepreneurship and research based innovation in cooperation between the*	*Example: We seek to create cooperation between the university, student, and local businesses. We have identified relevant stakeholder x, x, and x and will set up meetings*	*Example: Spring semester 2021*	*Example: Increase the number of youth who has relevant skills in entrepreneurship and research based innovation* *Promote collaboration between students and business for capacity*	*Example:* *Involve x, x, and x to develop a course. Have at least two meetings between these stakeholders* *Train at least 30 students*

university and local businesses as well as establish networks between students and businesses			*building, employment and entrepreneurship* *(for inspiration see D.6.1)*	*Collect feedback on the course from at least 20 students to improve training in the future.*

6. Which aspects of RRI are incorporated in the transformative experiment?
   - Please also specify particular territorial RRI aspects (e.g. which "territory-making policy orientations" are taken into account? Which "territory-making governance framework" are taken into account? Which RRI keys adapted to territorial RRI are taken into account? For inspiration see. D.3.3.)
7. What are the challenges and barriers for the TE implementation and for achieving the intended impact(s)?
8. How do you plan to meet the challenges and barriers?
9. Do you need any resources or help from other partners in the project?
10. Do you have additional remarks regarding the TE design and implementation process?
