Sacred submission: August 28, 2026 — Sawan Purnima · 🔱

Version 1.2 · October 2026

About This Document

This is a public summary of The Foundations of CI-VO Science, a white paper submitted for institutional peer review on August 28, 2026 — Sawan Purnima. The full paper runs 171 pages and develops the framework in complete depth: the governing formula, the eighteen structural laws, and the eight-model diagnostic and corrective architecture.

This summary is designed to give a serious institutional reader everything needed to evaluate whether the framework merits deeper engagement — the diagnosis, the gap it addresses, what the framework names (without its internal architecture), and the roles through which an institution may engage with it. The proprietary formula, laws, and models are reserved for the full paper, available on request (see the final pages).

कार्पण्यदोषोपहतस्वभावः पृच्छामि त्वां धर्मसम्मूढचेताः । यच्छ्रेयः स्यान्निश्चितं ब्रूहि तन्मे शिष्यस्तेऽहं शाधि मां त्वां प्रपन्नम् ॥ २.७ ॥

Kārpaṇya-doṣopahata-svabhāvaḥ pṛcchāmi tvāṃ dharma-sammūḍha-cetāḥ — Yac chreyaḥ syān niścitaṃ brūhi tan me śiṣyas te'haṃ śādhi māṃ tvāṃ prapannam

"With my nature overcome by helplessness, my mind confounded about duty, I ask you: tell me decisively what is best. I am your student — instruct me, for I stand at your threshold."

— Bhagavad Gītā 2.7 · The threshold verse. Civilisation's posture at the opening of this paper: confounded by the evidence, asking for decisive guidance.

Provenance and Authorship

Author contribution. The core concepts, framework architecture, formula construction, the CI-VO Laws, the proprietary terminology, and the interpretive recovery of the Bhagavad Gītā as a systems-science source are the original intellectual work of the researcher, Sanjive Kumar Sharma.

Production assistance. The composition, structural editing, formatting to the House Style, diagram and table construction, and preparation of this document were carried out with the assistance of an AI platform operating under the researcher's direction. All conceptual content remains the researcher's own; the platform served as a production and drafting instrument, not a source of the framework's ideas.

Intellectual property. Wisdom principles are presented by their translated scientific names only. The source is referenced as the Bhagavad Gītā, read as classical Indian systems thinking, with full philosophical integrity and no disclosure of internal structural architecture. The CI-VO™ Science framework forms part of TRIKO™, the proprietary research architecture within which the white paper is the first public expression.

Standing invitation to peer review. The paper is issued as a standing invitation to peer review. The roles through which an institution may engage with it are described later in this summary.

Sources and revisions. See the note at the end of this summary.

EXECUTIVE SUMMARY

The Single Claim

Modern civilisation is not failing because of resource scarcity, technological limitation, or political incompetence. It is failing because it has no unified operating logic connecting how individuals think, to how institutions decide, to how civilisations sustain themselves. CI-VO Science provides that logic.

This is not a philosophical position. It is a structural hypothesis — derived from systems science, expressed in a governing formula, examined against four independent civilisational failures, governed by eighteen laws, and operationalised in a four-scale implementation architecture. This summary sets out the diagnosis and names the discipline; the full paper builds, examines and expresses the logic itself, and independent testing is the step that follows.

The Civilisational Diagnosis — What the Evidence Shows

Civilisation is not failing for lack of resources. It is failing despite unprecedented resources. In the eight decades since the founding of the United Nations, the world has built the most extensive institutional infrastructure in recorded history — and the strain on civilisational systems keeps rising. Six published indicators describe that strain.

Signal	Reading	Signal	Reading
Worry that leaders deliberately mislead people (Edelman 2025, 26-market average)	7 in 10	New wealth, Dec 2019–Dec 2021, captured by the richest 1% (Oxfam 2023)	63%
Assessable SDG targets on track (UN SDG Report 2024)	17%	Earths of biocapacity consumed each year (Global Footprint Network 2024)	1.7
Average time on one screen before switching, in studies since c. 2016; about 2.5 min in 2003–04 (Mark 2023)	47 sec	Adults who helped a stranger, gave money or volunteered in the past month (CAF 2023)	72%

Six published indicators — institutional trust, financial systems, SDG progress, technology, ecology and social cohesion. Full sources, periods and populations: Annexure 1 of the white paper.

The cited indicators describe distinct forms of institutional, social and ecological strain. They differ in population, period and method and are not a single pooled measure. CI-VO Science proposes that features of human judgement may connect some of these patterns. This is a hypothesis to be tested, rather than a causal conclusion established by the indicators alone.

The central hypothesis of CI-VO Science is precise: that the six GIFTES domain failures share one common root — the absence of an integrated operating logic connecting how individuals think to how institutions decide to how civilisations sustain themselves. This is not a resource failure. It is a software failure — and no amount of hardware investment (policy, regulation, treaty, institutional reform) corrects a software error.

What CI-VO Science Is — and What It Is Not

CI-VO Science (Civilisational Operating Science) is the scientific discipline that sets out a unified, measurable operating logic connecting individual cognitive quality to institutional decision-making to civilisational systemic health — in a single architecture designed to be traceable, testable and restorable.

It is not a replacement for the SDGs, for behavioural economics, or for political philosophy. Every existing framework has produced genuine insight and genuine institutional value. CI-VO Science does not propose

to discard any of them — it completes them, by operating at the causal level existing frameworks were built above.

It is not a spiritual framework. The Bhagavad Gītā is referenced throughout this research because it is one of the world's most precisely formulated and longest continuously transmitted texts on the governance of human cognition and its civilisational consequences — not because it is sacred. It is read as an engineer reads a load-bearing specification: for structural precision.

What CI-VO Science Uniquely Provides

What it provides	Why it matters for the institutional mandate
A unified causal architecture	A single framework connecting individual cognitive quality, institutional decision-making and civilisational systemic health in one testable equation — building on behavioural and institutional research on judgement, and integrating it into a governed system.
A measurable Causal Floor	An explicit focus on the cognitive operating layer that most institutional frameworks treat as given — with proposed instruments designed to measure it.
One of the oldest continuously transmitted sources	The Bhagavad Gītā, read not as scripture but as one of humanity's oldest continuously transmitted texts on cognition and conduct, read here as a systems-science manual.
A proof architecture	Four independent civilisational failures, in different domains and governed by different frameworks, examined with the same diagnostic instrument. The Foundation's reading is that they converge; the test is declared falsifiable, and independent replication is the proof still to come.
An implementation sequence	A four-scale causal sequence — Individual → Institutional → National → Global — with measurable targets and SDG integration points, deployable within existing institutional infrastructure.

Each capability connects directly to the mandate of UNESCO and other Tier-1 institutions — international scientific cooperation, education quality, and long-term civilisational resilience.

The Master Equation — Named, Not Derived

The full derivation, decomposition, and worked domain calculations of the governing formula are reserved for the full paper (Section 5). At the level appropriate for a first reading, the equation is a five-variable, multiplicative, network-summed structure:

$COS(t) = \Sigma_{network}\ [\ HOS_i \times CQ_i \times Lw_i \times K(t) \times Y(t)\ ]$ — Civilisational Operating State. HOS_i, CQ_i, Lw_i and $K(t)$ normalised [0,1]; $Y(t)$ a non-negative multiplier. Multiplicative — the weakest variable governs the outcome.

Variable	Name	What it measures (at a glance)
$COS(t)$	Civilisational Operating State	Aggregate systemic health of the civilisational network. Read in the full paper through domain B-Scores; no composite headline figure is published.
HOS_i	Human Operating System	The architecture of each human agent — architecturally invariant; what varies is the software governance state.
CQ_i	Cognitive Quality Index	The Causal Floor variable — the degree to which an agent's cognition is aligned toward systemic contribution. The highest-leverage intervention point.
Lw_i	Leadership Weight Coefficient	The influence weight of each node, normalised to [0,1]: general agents near the floor, the most influential leaders near the ceiling — an illustrative influence potential up to four orders of magnitude (≈ 10,000×) greater.
$K(t)$	Wisdom Signal Strength	The quality of what is transmitted through educational and institutional systems — decaying as information volume rises.
$Y(t)$	The Yajña Factor	The contribution-to-extraction ratio. Stability requires net-positive contribution, not net-zero.

A Reader's Map — What the Full Paper Contains

§	Section	What it does
S1	The Civilisational Diagnosis	Documents strain across all six GIFTES domains and traces them to one shared root: the absence of an integrated operating logic at the Causal Floor.
S2	Why Existing Frameworks Fail	Maps the structural ceiling of the major existing frameworks and locates the gap CI-VO Science addresses.
S3	The Proof Architecture	Four independent civilisational failures, examined with the same diagnostic instrument and tested for convergence on one causal structure. Falsifiability declared.
S4	The CI-VO Science Framework	Eight models, one causal chain — the complete diagnostic and corrective architecture.
S5	The Civilisation Formula	The master equation, fully expressed and decomposed, with all supporting formulas, a fixed normalisation rule and worked domain B-Scores.
S6	The CI-VO Laws of Civilisation	Eighteen structural laws, each a testable proposition with a Bhagavad Gītā anchor, a formula-variable connection, and an institutional implication.
S7	Validation & Implementation	Four scales in causal sequence, four falsifiable pilot proposals, and the roles an engaging organisation may occupy.

THE CIVILISATIONAL DIAGNOSIS

The Pattern That Requires Explanation

धर्मक्षेत्रे कुरुक्षेत्रे समवेता युयुत्सवः । मामकाः पाण्डवाश्चैव किमकुर्वत सञ्जय ॥ १.१ ॥

Dharmakṣetre Kurukṣetre samavetā yuyutsavaḥ — Māmakāḥ Pāṇḍavāś caiva kim akurvata Sañjaya

"O Sañjaya — assembled on the sacred field, eager for battle — what did my sons and the sons of Pāṇḍu do?"

— Bhagavad Gītā 1.1 · The question that opens everything. One of humanity's oldest continuously transmitted texts begins not with an answer, but with a question. Modern civilisation is asking the same one.

The Bhagavad Gītā does not begin with an answer. It begins with a question — a blind sovereign, at the edge of the greatest battlefield in recorded memory, asking his minister for a situation report. What is happening, and why is it not resolving?

CI-VO Science calls this moment Introgniton — the fusion of introspection and ignition: the moment cold observation of fact collides with the hot urgency of a question that can no longer be deferred. Every institutional summit, every assessment report, every progress review is currently civilisation's own version of that same question — asked of the outer battlefield, never yet of the inner one.

The Blind Sovereign — A Systems Reading

Dhṛtarāṣṭra is not merely a narrative figure. He is a systems-science archetype every institutional reader will recognise, because modern governance is full of him. He is a system insulated from corrective feedback: unable to receive signal from outside his own operating assumptions, and therefore accumulating entropy — not for lack of resources or intelligence, but because he cannot process reality without first filtering it through what he already believes.

His opening question encodes a second structural failure: Binary Dissociation. He frames the battlefield as "my sons versus the sons of Pāṇḍu" — attempting to decouple his own assets from the operating laws of the system that sustains them. This is the cognitive architecture every extractive institution in the modern world replicates: claim the benefits of the system while refusing accountability to the laws that sustain it.

The Dual-Process Platform

The battlefield is named with two words at once — Dharmakṣetra and Kurukṣetra. This is not geographic redundancy. It is a precise description of every civilisational field of action.

Kurukṣetra — The Field of Action	Dharmakṣetra — The Field of Operating Logic
The measurable, the metric, the output — policies, indicators, institutional deliverables. Fully instrumented at planetary scale.	The cognitive operating logic generating those outputs — the quality of the agents producing them. Studied in parts by behavioural and institutional research, but without an integrated framework.
Where most existing frameworks operate: the SDGs, behavioural economics, political philosophy, management science.	Determines the quality of everything produced in the field of action.

The Dual-Process Platform. Every civilisational field of action contains both domains at once. Most existing frameworks operate in the left zone; CI-VO Science provides the integrated framework for the right.

More of Everything — and Rising Strain

Civilisation is not failing for lack of resources. It is failing despite unprecedented resources. In the eight decades since the founding of the United Nations, the world has built the most extensive institutional infrastructure in recorded history and adopted the most comprehensive global policy framework ever attempted — the Sustainable Development Goals, adopted by all 193 UN member states — and the strain on civilisational systems keeps rising.

More resources. More frameworks. More data. More institutional attention. And rising strain. This is not the signature of a system that is under-resourced. CI-VO Science reads it as the signature of a system that is misdiagnosed.

Six Domains, One Pattern

CI-VO Science identifies six structural, load-bearing pillars of any sustainable civilisation — the GIFTES domains. What is historically unprecedented is that all six show strain at the same time, despite unprecedented institutional attention directed at each independently.

Domain	What it measures	Quantitative anchor
G — Governance	Quality and reciprocity of authority structures	More than two-thirds of countries score below 50/100 on the Corruption Perceptions Index (global average 43); democracy for the average person back to 1986 levels in 2022 (Transparency International 2024; V-Dem 2023)
I — Institutional trust	Strength of collective coordination capacity	About seven in ten worry that leaders deliberately mislead people (Edelman 2025, 26-market average); about one respondent in five says their organisation excels at decision making (McKinsey 2019, self-reported)
F — Financial systems	Circulation versus concentration of value	The richest 1% captured 63% of new wealth created Dec 2019–Dec 2021; the other 99% received 37% (Oxfam 2023)
T — Technology ethics	Alignment of technology with human contribution	About 47 seconds on one screen before switching in studies since c. 2016, down from about 2.5 minutes in 2003–04 (Mark 2023); adolescent depression and anxiety rose sharply after about 2012 in the US and several wealthy countries (Haidt 2024)
E — Ecology	Regenerative ratio of natural systems	1.7 Earths of biocapacity consumed annually (Global Footprint Network 2024); 75.9 million people internally displaced at end-2023, by conflict and disasters (IDMC 2024)

Domain	What it measures	Quantitative anchor
S — Social cohesion	Integrity of intergenerational and community fabric	Lack of social connection carries a mortality risk comparable to smoking up to 15 cigarettes a day (US Surgeon General 2023, drawing on Holt-Lunstad et al. 2010); about 24% of people in 142 countries and territories feel very or fairly lonely (Meta-Gallup 2023)

The six GIFTES domains, each independently documented and sourced. Individual domain stress has characterised every period of civilisational history; simultaneous strain across all six, under conditions of resource abundance, is the pattern that requires explanation.

The Common Root — the Causal Floor

If all six domains are under strain at once — across different geographies, institutions, and political systems — the explanation may not be domain-specific. CI-VO Science identifies the Causal Floor: the cognitive operating level at which individual agents determine whether they function as contributors to the system or extractors from it. Existing frameworks — policy architectures, governance designs — operate largely above this floor. None was designed primarily to measure or restore what happens there.

Simultaneous multi-domain strain under conditions of resource abundance is not a resource failure but a diagnostic failure — something wrong at the level below all six domains, a level current frameworks do not directly address.

The stagnation is documented with institutional precision: the global Corruption Perceptions Index has been essentially unchanged for over a decade (average 43 in 2024); global freedom declined for the seventeenth consecutive year in 2022 (Freedom House); only 17 per cent of the 135 assessable SDG targets were on track in 2024 (UN). CI-VO Science diagnoses them not as implementation failures but as the signature of intervention above the Causal Floor producing no durable correction — the diagnosis the full paper develops across Section 1.

WHY EXISTING FRAMEWORKS FAIL

The Structural Ceiling, and the Gap CI-VO Science Addresses

धूमेनाव्रियते वह्निर्यथादर्शो मलेन च । यथोल्बेनावृतो गर्भस्तथा तेनेदमावृतम् ॥ ३.३८ ॥

Dhūmenāvriyate vahnir yathādarśo malena ca — Yatholbenāvṛto garbhas tathā tenedam āvṛtam

"As fire is covered by smoke, as a mirror by dust, as an embryo by the womb — so is knowledge covered by this."

— Bhagavad Gītā 3.38 · The signal is present. The source is intact. What existing frameworks lack is not the signal — it is the instrument that clears what covers it.

Let the record be stated without ambiguity before any critique begins. The frameworks that exist are not failures — they are among the most significant achievements in the history of institutional science. The Sustainable Development Goals represent the most ambitious, most comprehensively adopted attempt at civilisational self-correction in recorded history. Behavioural economics transformed our understanding of how people actually decide. Political philosophy gave civilisation its constitutional architecture. Management science made institutions measurably more effective. Systems thinking gave us the vocabulary for complexity itself.

The question CI-VO Science asks is not whether these frameworks are well designed. They are. The question is whether any framework designed at the level these frameworks operate at could have produced different results from the ones the diagnosis documents. The answer, structurally, is no — because none of them was designed with the Causal Floor as its primary layer.

Framework Comparison — Achievement and Structural Ceiling

Framework	Level	What it achieves	Structural ceiling
SDGs / UN Architecture	Outcomes	231 unique indicators across 17 goals; the most comprehensive effort to make civilisational health a measurable, accountable target.	Measures what happens above the level where it is caused.
Behavioural Economics	Behaviour	Dual-process cognition framework (Kahneman); maps the gap between declared and revealed preference.	No instrument for the fracture between knowing and doing at the causal level.
Political Philosophy	Structures	Constitutional theory, governance design, justice frameworks.	Designs structures without a model of the cognitive state of the agents operating within them.
Management Science	Institutions	Organisational design, leadership development, measurable efficiency gains.	Optimises what institutions do without addressing the cognitive quality of the people doing it.
Systems Thinking	Relationships	Maps feedback loops, emergent properties, non-linear dynamics.	Maps relationships between components, not the cognitive quality of the agents operating them.
CI-VO Science	Causal Floor	A proposed unified instrument connecting individual cognitive quality to institutional decision-making to civilisational health.	Not a ceiling — a foundation. Proposes the missing causal layer that would make existing frameworks structurally more effective.

Framework comparison: achievement and structural ceiling. Existing frameworks comprehensively address behaviour, structures and outcomes; behavioural science reaches into parts of the Causal Floor, but none is designed to operate there as its primary layer. CI-VO Science is built at that level and designed to connect all levels in one architecture.

Every framework, however sophisticated, encounters the same class of question it cannot answer: why does the same structure produce different outcomes in different institutional cultures? Why does decision quality remain poor despite process reform? These questions are not unanswerable — they are unanswerable from above the Causal Floor. CI-VO Science does not replace any existing framework. It completes them, by operating at the level they were built above.

THE PROOF ARCHITECTURE

Four Failures, One Convergence Test

Section 3 of the full white paper does not simply propose the framework — it examines it against a declared falsifiability test. Four independent civilisational failures, from different domains, governed by different institutional frameworks, are each subjected to the same diagnostic instrument: the COS formula. This orthogonality transforms examples into a structured comparative test.

Problem	Primary variable	Domain	Existing ceiling
Institutional trust collapse	CQ_i — Cognitive Quality	GIFTES: I	Transparency, accountability, communications
Climate action failure	Y(t) — Contribution ratio	GIFTES: E	Incentives, treaties, carbon pricing
Education system failure	K(t) — Wisdom signal	SDG 4	Access, curriculum, funding
Co-Algo-Crisy	K(t) × CQ_i compound decay	GIFTES: T	Platform regulation, mental-health policy

The convergence test. Four independent domains, one diagnostic instrument, one causal structure at the Causal Floor. The convergence is the evidence; independent replication is the next step.

Each problem receives the full CI-VO Lab Protocol: Observation → Variable Mapping → Decryption → Protocol. Falsifiability is declared in advance: if CI-VO Science is correct, all four should converge on a common causal structure at the Causal Floor. If they do not, the framework fails.

If CI-VO Science is correct, four independent civilisational failures — across institutional, ecological, educational, and technology-ethics domains — should converge on one common causal structure when tested through the same instrument. If they do not converge, the framework fails. They converge — and the paper invites independent replication.

THE CI-VO SCIENCE FRAMEWORK

Eight Models. One Causal Chain.

यावत्सञ्जायते किञ्चित्सत्त्वं स्थावरजङ्गमम् । क्षेत्रक्षेत्रज्ञसंयोगात्तद्विद्धि भरतर्षभ ॥ १३.२६ ॥

Yāvat sañjāyate kiñcit sattvaṃ sthāvarajaṅgamam — Kṣetrakṣetrajñasaṃyogāt tad viddhi Bharatarṣabha

"Whatever being is born — moving or unmoving — know it to arise from the union of Field and Knower of the Field."

— Bhagavad Gītā 13.26 · The generative law of CI-VO Science. All civilisational output is the sum of individual Field–Knower interactions.

The CI-VO Science framework is not a collection of eight separate models. It is one causal chain expressed at eight resolutions — from the cosmological foundation that establishes why the individual-to-civilisation connection is structurally real, to the regenerative action architecture that describes what aligned civilisational action looks like in practice. Each model is the logical precondition for the one that follows.

The internal architecture of each model — the diagrams, the derivations, the diagnostic instruments — is developed at full depth in the complete white paper (Section 4). This summary names the eight models and the question each answers.

Model	Formula variable	Diagnostic question answered
M1 — COS Foundation Model	COS(t)	What is the structural law connecting the cosmos to the individual?
M2 — HOS Arc Structure Model	HOS_i	What is the architecture of each human node in the network?
M3 — Wheel-O-Senso-Rix™	CQ_i upstream	Where does cognitive quality first degrade — and why?
M4 — DI-COS-TREE	CQ_i causal	How does Causal Floor fracture transmit to civilisational collapse?
M5 — Cognito-Crisy	CQ_i pathology	What is the name and structure of the primary civilisational pathology?
M6 — Le-Greto-Ex-Imātion™	Lw_i	Why does leadership cognitive quality govern civilisational trajectory?
M7 — Vi-Re-Gno-Vātion™	K(t)	How does wisdom decay — and how is it restored?
M8 — The O-Trinity	Y(t)	What is the architecture of civilisationally aligned action?

The eight CI-VO Science models: one causal chain at eight resolutions. Together they constitute a unified framework connecting individual cognitive operating quality to civilisational systemic health. Full architecture: Section 4 of the complete white paper.

VALIDATION & IMPLEMENTATION

Four Scales, One Causal Sequence

तस्मादसक्तः सततं कार्यं कर्म समाचर । असक्तो ह्याचरन्कर्म परमाप्नोति पूरुषः ॥ ३.१९ ॥

Tasmād asaktaḥ satataṃ kāryaṃ karma samācara — Asakto hy ācaran karma param āpnoti pūruṣaḥ

"Therefore, without attachment, perform always the action that ought to be done — for performing action without attachment, one attains the Supreme."

— Bhagavad Gītā 3.19 · The implementation verse. The diagnosis is set out; the prescription is action, performed in the right sequence.

CI-VO Science does not prescribe a global transformation programme, a new international treaty, or a civilisational reset. It prescribes a causal sequence: restore the upstream variable first, and every downstream variable becomes more tractable. The corrective begins at Scale 1 — the individual — and ascends through the institutional, national, and global scales in the direction the causal sequence

prescribes. The complete operational design — the CI-VO PhE-RAM-Work — is developed in full in the paper (Section 7) and its dedicated deployment paper.

Scale	Unit of intervention	What it restores
1 · Individual	Leader / agent	Cognitive Quality (CQ_i) restoration at the Causal Floor — the highest-leverage intervention point in the entire architecture.
2 · Institutional	Organisation / institution	Institutional decision-integrity (I^3) restoration — closing the gap between declared values and enacted decisions.
3 · National	Nation-state / policy system	National Civilisational Balance monitoring across all six GIFTES domains.
4 · Global	International architecture	A cross-national covenant architecture and Global Wisdom Infrastructure (GICON-GWI) — no new treaty, no new body.

The four implementation scales in causal sequence. Each scale provides the substrate for the scale above it. Attempting to produce global-scale outcomes without first building the individual and institutional foundation is the implementation error that has governed civilisational frameworks for decades.

POSSIBLE ROLES FOR ENGAGING ORGANISATIONS

Four Roles — Described, Not Solicited

तद्विद्धि प्रणिपातेन परिप्रश्नेन सेवया । उपदेक्ष्यन्ति ते ज्ञानं ज्ञानिनस्तत्त्वदर्शिनः ॥ ४.३४ ॥

Tad viddhi praṇipātena paripraśnena sevayā — Upadekṣyanti te jñānaṁ jñāninas tattva-darśinaḥ

"Know that through humble approach, through inquiry, and through service — the knowers of truth will impart the knowledge to you."

— Bhagavad Gītā 4.34 · The inquiry verse. Knowledge advances through structured inquiry and disciplined service.

Peer review is not claimed here; validation is not asserted. The framework anticipates four roles an organisation may independently elect to occupy in the course of examining it. None is solicited, and each is initiated by the organisation itself. The four roles are self-selecting: an organisation reads its own mandate in one of them, or in none.

Role	Organisational function	Contribution to validation
Tier I — Peer Reviewer / Validation Organisation	Independent scientific review of the theoretical architecture, or independent methodological validation of the instruments.	Establishes the external scrutiny on which the framework's scientific standing depends.
Tier II — Pilot Host Institution	Independent hosting of a bounded, falsifiable pilot of a prescribed instrument within the organisation's own cohort.	Produces first field readings against the framework's falsifiable hypotheses.
Tier III — Data & Measurement Organisation	Contribution of measurement capacity, datasets, and integration pathways for the B-Score, CBI and K(t) instruments.	Strengthens the empirical basis of the civilisational-metrics instrument set.
Tier IV — Multilateral Observer / Contribution Track	Observation of the validation programme, with the option to map instruments to existing agendas — SDG 4.7, SDG 16, SDG 17.	Locates validated instruments within the multilateral architecture, with no new treaty and no new body.

The four roles, self-selecting by organisational mandate. Tier I scrutinises the science; Tier II tests it in the field; Tier III instruments it; Tier IV situates it within the multilateral architecture. Each role, if occupied, strengthens the validation record; none is a precondition for any other, and none is required of any organisation.

The Designed Sequence

The programme unfolds in a sequence that mirrors its own causal logic. Scientific scrutiny can proceed from the paper's submission. Field testing follows the release of the programme's measurement instrument, so that any pilot begins with the full diagnostic toolkit in hand. Scrutiny first, instrumentation second, field testing third — the order is not administrative but causal.

Where a Tier II pilot is hosted, the framework prescribes the Paramparā transmission model: institutional faculty are trained and certified as framework transmitters, certified transmitters deliver the instrument to cohorts within their own institution, and periodic recalibration preserves transmission fidelity. The capability, once built, remains with the institution — the pilot concludes; the transmission chain does not.

Frequently Asked Questions

Is this a religious or spiritual document?

No. The Bhagavad Gītā is read here as classical Indian systems thinking — a precisely formulated, continuously transmitted text on the governance of human cognition — not as scripture. It is cited the way an engineer reads a load-bearing specification: for structural precision, not devotion.

Does CI-VO Science replace the SDGs or existing institutional frameworks?

No. Every existing framework — the SDGs, behavioural economics, political philosophy, management science, systems thinking — has produced genuine institutional value. CI-VO Science does not propose to discard any of them. It completes them, by operating at the causal level existing frameworks were built above.

What is TRIKO™, and why isn't its internal architecture disclosed?

TRIKO™ is the proprietary research architecture within which CI-VO Science was developed; this white paper is its first public expression. Consistent with standard practice for original research programmes, the framework's internal structural architecture is not disclosed publicly. What is disclosed — the diagnosis, the named models, the formula variables, and the eighteen laws in the full paper — is sufficient for independent scientific evaluation.

How can an institution verify the claims in this summary?

Every published indicator cited in this summary is drawn from named, dated, publicly available sources — the UN Sustainable Development Goals Report, the Edelman Trust Barometer, the V-Dem Democracy Report, and others — each listed with its publication date, observation period and population in Annexure 1 of the full paper. The four-failure convergence test is designed specifically to be independently replicable by a Tier I reviewing organisation.

What happens after an institution writes in?

The complete white paper is issued directly to every institution that writes in, together with the fuller description of the four engaging-organisation roles. No role is assumed or assigned, and none is required — an institution self-selects the form of engagement, if any, that fits its own mandate.

How to Request the Full White Paper

The Foundations of CI-VO Science — the complete 171-page white paper, including the governing formula, the eighteen structural laws, and the full eight-model architecture — was submitted for institutional peer review on August 28, 2026 — Sawan Purnima.

Institutions and researchers who wish to examine the complete paper are invited to write in, with a brief note of institutional affiliation and area of interest. The complete paper is issued directly in response.

Write to research@bgtkfoundation.org with your institutional affiliation and area of interest. The complete white paper — and the possible roles for engaging organisations described on the preceding pages — will be shared directly.

The North Star

CI-VO Science is not another paper about the Bhagavad Gītā. It is the discipline that recovers, from the oldest continuously living wisdom tradition on earth, the operating system that modern civilisation is searching for — and expresses it in the language that global institutions can actually use.

The diagnosis is set out. The framework is named. The gap is located. The roles through which an institution may engage are described. What remains is the question this paper opens with, and the one every reader is invited to ask of their own institution:

> ***What is actually happening here — and what does that demand of us?***

That question — asked with the full weight of the evidence this summary presents — is the condition for everything the complete white paper provides. The source was never absent. The instrument is now specified. The decision is institutional.

Note on Sources and Revisions

This paper draws on reports, datasets and studies from multiple institutions, published at different times and using different definitions. These sources inform the analysis of civilisational conditions and the application of the CI-VO Science framework.

Source figures and descriptions may require updating as source reports are revised or further verified. The Foundation will document confirmed corrections and incorporate them into subsequent editions, including any consequential changes to calculations or interpretation.

Readers may send source clarifications and corrections to research@bgtkfoundation.org.
