This work was supported in part by the Swedish Knowledge Foundation as part of the Industry Graduate School for Data Intensive Applications (DIA), Linnaeus University (https://lnu.se/dia). The work of Ilir Jusufi was supported in part by the Knowledge Foundation, Sweden, through the project "Rekryteringar 21, Universitetslektor i spelteknik" under Contract 20210077.

In the above article [1], reference 87 was retracted. As the work in that reference is no longer reliable, reference 87 has been replaced with [2]. This results in the following corrections:

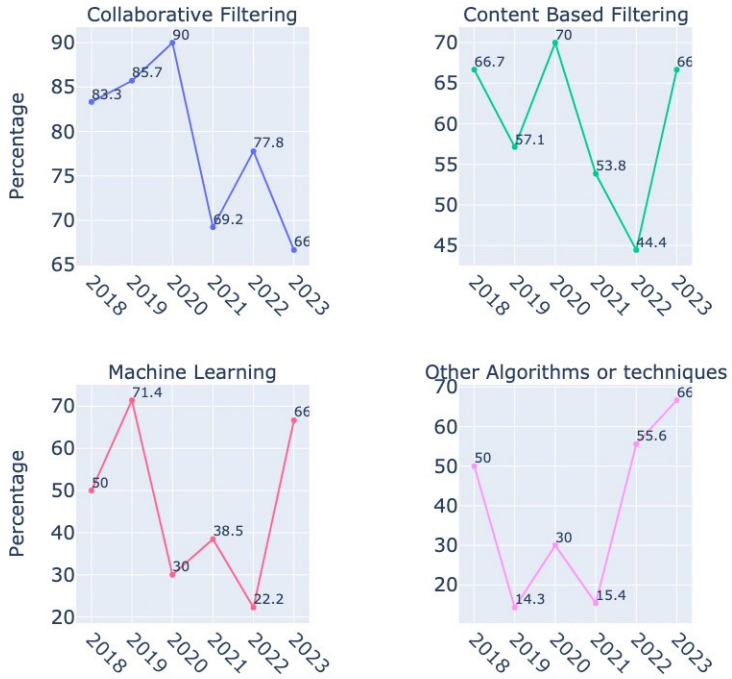

FIGURE 1. Algorithms and year ratio.

Figure 3 (on page 28280) in the Results section has been replaced with Figure A, as shown below.

In Table 3 of ANALYSIS AND DISCUSSION (page 28284), [2] has been used instead of 87, and the datasets in the column ''Datasets Used for Evaluation'' have been changed from Book Crossing Dataset and Amazon's movie dataset to MovieLens, Yelp dataset, and Goodreads.

In the ANALYSIS AND DISCUSSION and the subsection ''EMERGING ALGORITHMS AND COMBINATIONS'' (page 28287, left pane), the following paragraph has been changed to:

''The usage of the Hybrid (Content-Based Filtering and Collaborative Filtering) Recommender System Based on Bidirectional Encoder Representations from Transformers model, which is in short called HybridBERT4Rec, in Channarong et al. [2] also demands attention. The combination in HybridBERT4Rec is made by applying BERT to both content-based filtering (CBF), which models the target user's interaction history to create a user profile, and collaborative filtering (CF), which analyzes the interactions of similar users with the target item to generate an item profile, ultimately combining these profiles to predict a rating score.''

In TABLE 4: Frequently Used Datasets for Evaluation (page 28288, left pane), the count of ''MovieLens'' has been changed from 16 to 17.

In the Conclusion (page 28292, left pane), the following sentence has been changed to:

''Additionally, we explored the different datasets used, with the MovieLens dataset being the most frequently utilized in 17 out of 48 research studies.''

In TABLE 6: Publication details of reviewed studies (page 28288), the necessary changes have been applied.

In the REFERENCES (page 28294, right pane), reference 87 has been updated to [2].
